

DSP-3 Digital Signal Processor Hardware Manual Addendum

IMPORTANT INFORMATION- PLEASE READ!

QSC's DSP-3 Module has been designed to attach directly to the DataPort connector of QSC's CX, DCA, Powerlight, and Powerlight2 series amplifiers. When attached to CX, DCA, and PL2 amps, the module is supposed to receive its power through the DataPort from the amplifier. Modules connected to Powerlight amplifiers require an external DC supply (available from QSC).

CX, DCA, and PL2 amps made prior to August 1999 DO NOT provide adequate power supply voltage to the module, requiring the use of the same type of external DC supply as used with Powerlight amplifiers. The amps in question will have a serial number PRIOR to **0899XXXXX**, where the first four digits of the serial number are the MMY datecode. Again, the modules WILL work with these amps just fine, but will require the use of our external power supply.
