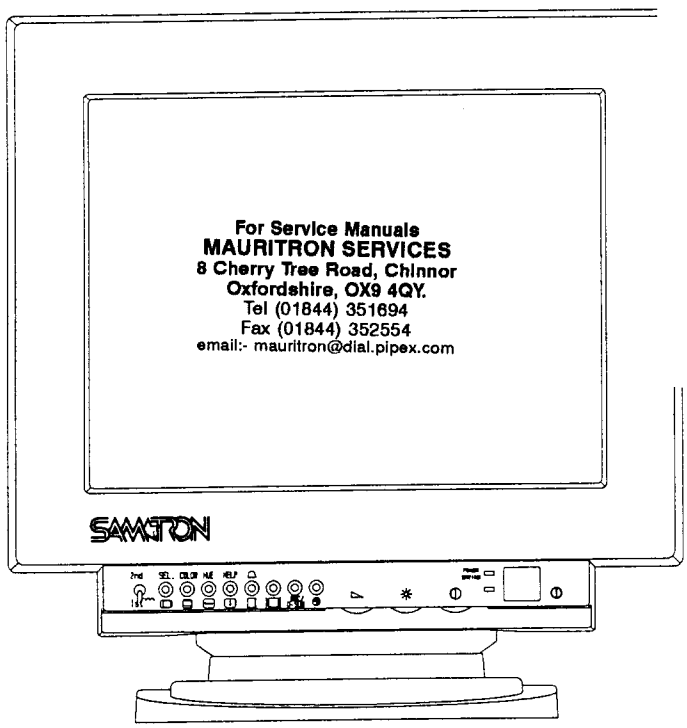
20" COLOR MONITOR

SAMTRON

SERVICE MANUAL

SC-208DXL



DOCUMENT NO.: 13-6-10001SY

REV. DATE : 1995.2.15

REV. NO.: A

CONTENTS

SPECIFICATION

Classification	Specifications
Picture Tube	20" (19V) Full Square, Flat Face, 90° deflection, 0.28 mm Dot Pitch, Silica-coated with anti-electrostatic, Medium short persistence phosphor
Scanning Frequency Horizontal Vertical	 30 kHz to 82 kHz (Automatic). 50 Hz to 120 Hz (Automatic).
Display Colors Analog Input	 Unlimited Colors.
Maximum Resolution Horizontal x Vertical	 1280 Dots x 1024 Lines.
Input Video Signal	Analog 0.714 Vp-p positive at 75Ω terminated.
Input Sync Signal	Separate Sync : TTL level positive/negative. Composite Sync : TTL level positive/negative. Sync on green : Composite sync 0.286 Vp-p negative, Video 0.714 Vp-p positive.
Video Band Width (Pixel Time)	150 MHz.
Power Supply Power consumption	AC 100-120/220-240 Volt, 60/50 Hz ±3 Hz . 130 Watt (MAX).
Active Display	Horizontal : 340 mm ±3 mm (5:4 ratio), 360 mm ±3 mm (4:3 ratio). Vertical : 270 mm ±3 mm. * Active display area is changed by signal timing.
Dimension Unit (HxWxD) Carton (HxWxD)	 19.3 x 19.9 x 20.1 inches (490 x 505 x 510 mm). 24.7 x 25.0 x 25.3 inches (627 x 633 x 642 mm).
Weight Approximately Net Gross	 63.9 Lbs (29 Kg). 72.8 Lbs (33 Kg).
Environmental Considerations Operating Temperature Humidity Storage Temperature Humidity	 32° F to 104° F (0° C to 40° C). 10 % to 80 %. -4° F to 113° F (-20° C to 45° C). 5 % to 95 %.
MPRII compliance	This model complies with SWEDAC (MPRII) recommendations for reduced electric and magnetic fields.

NOTE : DESIGNS and SPECIFICATIONS are subjected to change without prior NOTICE.

SAFETY PRECAUTIONS

Service work should be performed only by qualified service technicians who are thoroughly familiar with all of the following safety checks and servicing guidelines:

1. Warning

1) For continued safety, do not attempt to modify the circuit.
2) Disconnect the AC power before servicing.
3) Semiconductor heat sinks are potential shock hazards when the chassis is operating.

2. Servicing the High Voltage System and Picture Tube

When servicing the high voltage system, remove the static charge by connecting a 10 kohm resistor in series with an insulated wire (such as a test probe) between the chassis and the anode lead. (The AC line cord should be disconnected from the AC outlet.)

1) The picture tube in this display monitor employs integral implosion protection.
2) Replace with a tube of the same type and number for continued safety.
3) Do not lift the picture tube by the neck.
4) Handle the picture tube only when wearing shatterproof goggles and after discharging the high voltage anode completely.

3. X-Radiation and High Voltage Limits

1) Be sure all service personnel are aware of the procedures and instructions covering X-radiation. The only potential source of X-ray in a current solid state display monitor is the tube. However, the picture tube does not emit measurable X-ray radiation if the high voltage is as specified in the "high voltage check" instruction. It is only when high voltage is excessive that X-radiation is capable of penetrating the shell of the picture tube, including the lead in glass material.The important precaution is to keep the high voltage below the maximum level specified.

2) It is essential that serviceman have available at all times an accurate high voltage meter. The calibration of this meter should be checked periodically.

3) High voltage should always be kept at the rated value no higher. Operation at high voltages may cause a failure of the picture tube or high voltage circuitry and, also under certain conditions, may produce radiation in excess of desirable levels.

4) When the high voltage regulator is operating properly, there is no possibility of an X-radiation problem. Every time a color chassis is serviced, the brightness should be tested while monitoring the high voltage with a meter to be certain that the high voltage does not exceed the specified, value and that it is regulating correctly.

5) Do not use a picture tube other than that specified, or make un recommended circuit modifications to the high voltage circuitry.

6) When troubleshooting or taking test measurements on a display monitor with excessively high voltage, avoid being unnecessarily close to the display monitor. Do not operate the display monitor longer than is necessary to locate the cause of excessive voltage.

4. Fire and Shock Hazard

Before returning the display monitor to the user, do the following safety checks:

1) Inspect all lead dress to be certain that the leads are not pinched or that hardware is not lodged between the chassis and other metal parts in the display monitor.

2) Inspect all protective devices such as nonmetallic control knobs, insulating materials, cabinet backs, adjustment and compartment covers or shields, isolation resistor-capacitor networks, mechanical insulators, etc.

3) To be sure that no shock hazard exists, check for leakage current in the following manner:

① Plug the AC line cord directly into an AC 100-120/22-240 volt outlet. (Do not use an isolation transformer for this test)
② Using two clips leads, connect 1.5 kohm, 10 watt resistor paralleled by a 0.15 uF capacitor in series with all exposed metal cabinet parts and a known earth ground, such as electrical conduct or electrical ground connected to earth ground.
③ Use a SSVM or VOM with 1000 ohms per-volt or higher sensitivity to measure the AC voltage drop across the resistor. (See Figure 1.)

④ Connect the resistor to all exposed metal parts having a return path to the chassis (metal cabinet, screw heads, knobs and shafts, escutcheon, etc.) and measure the AC voltage drop across the resistor.

⑤ Any reading of 5.25 volt RMS (this corresponds to 3.5 milliampere AC) or more is excessive and indicates a potential shock hazard which must be corrected before returning the display monitor to the user.

5. Product Safety Notices

Some electrical and mechanical parts have special safety-related characteristics which are often not evident from visual inspection, nor can the protection they give necessarily be obtained by replacing them with components rated for higher voltage, wattage, etc. Parts that have special safety characteristics are identified by ⚠ on schematics and parts lists. Use of a substitute replacement that does not have the same safety characteristics as the recommended replacement part might create shock, fire and/or other hazards. Product safety is under review continuously and new instructions are issued whenever appropriate.

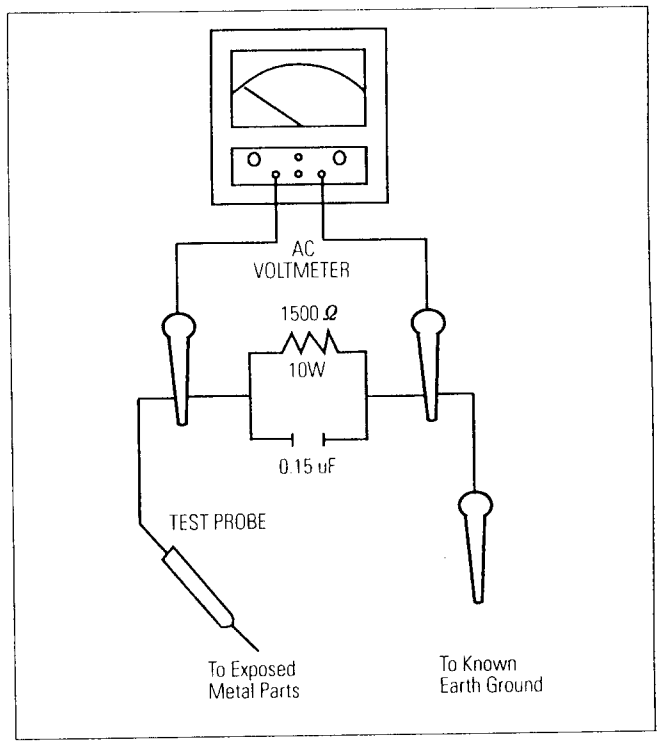


Figure1. Leakage Current Test Circuit

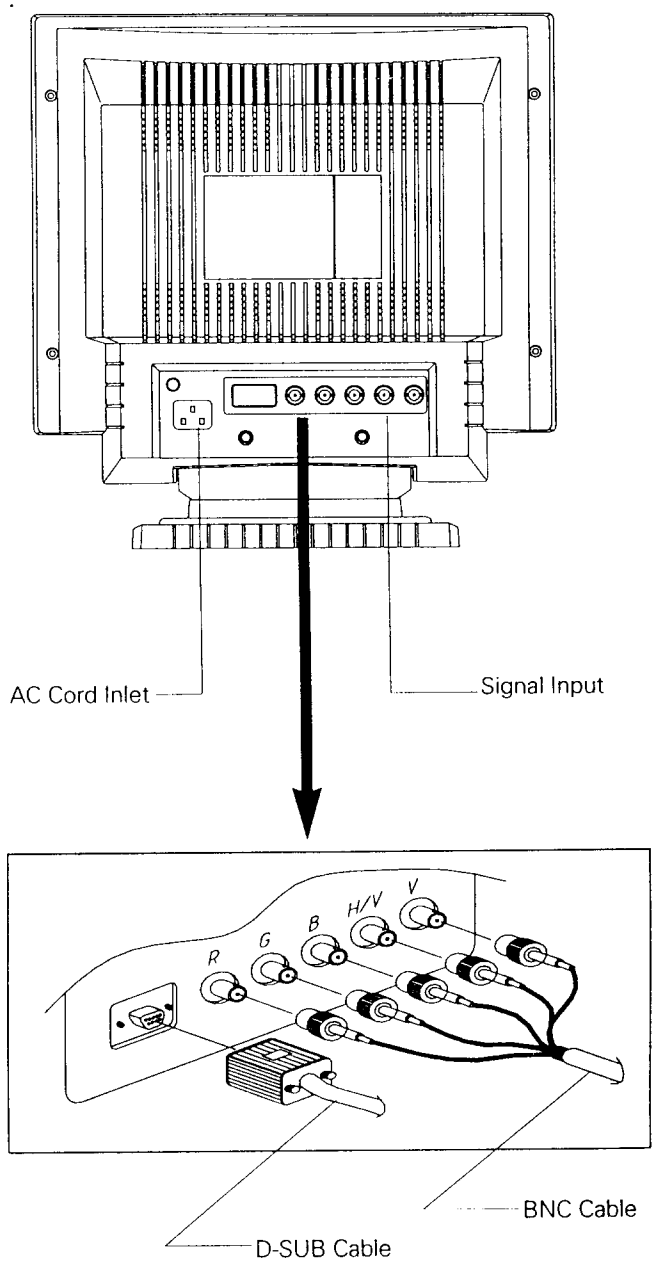
GENERAL INFORMATION

1. Features

1) 20-inch (19-inch visual) Square Technology CRT reduces glare and enhances viewing area.
   - 0.28 mm Dot Pitch.
2) Anti-static CRT coating eliminates static electric shock and helps keep the screen dirt free.
3) Dynamic focusing provides optimum clarity in all areas of the display.
4) Automatically scans horizontal frequencies from 30-82 kHz, and vertical frequencies from 50-120 Hz.
5) Compatible with a wide variety of video standards including VGA, super-VGA, IBM XGA, XGAII, MacintoshII, IBM 8514/A, 1024x768 non-interlaced, and 1280 x 1024 non-interlaced.
6) With the optional cable adapter this monitor is compatible with the MacintoshII family, the Macintosh LC/LCII and QUADRA series.
7) Supports VESA flicker-free modes.
8) Microprocessor based digital control system saves up to 11 user definable display settings. Also includes 12 factory preset display settings.
9) This model complies with SWEDAC(MPRII) recommendations for reduced electric and magnetic fields.
10) Power supply operates on AC 100-120/220-240 Volt 60/50 Hz for use all over the world.
11) Dual signal inputs allow connection to two video sources, VGA(D-Sub) and 1280x1024(BNC), for example, and either can be selected with a front panel switch.
12) Your display has been designed to operate on all power systems, including "IT" power systems.
13) Power management system:
    The power management circuit, when signaled by the computer system, will reduce power consumption when the computer system is not in use.
14) Optional Feature
    Please consult your dealer for information about these optional features. Apple Macintosh connector adapter are available for connecting the monitor to the Apple Macintosh family, Macintosh LC/LCII/LCIII, Centris, and Quadra series computer.

2. Installation



This monitor can be connected to any IBM compatible analog display adapter. Such adapters include VGA, 8514/A, XGA, and the built-in video system of IBM PS/2 computers and compatibles. Also, this monitor can be connected to a high resolution (1280 x 1024) video controller, such as those used with CAD/CAM applications. Both connections can be used separately or simultaneously. Selection between the two signal sources is controlled by a front panel switch.

To attach the monitor to your system, use the following instructions:

1) Turn off the power to the computer.

2) Connect video signal cable to the D-sub or the BNC connectors on the rear of the monitor.

   Note : Two signal sources can be connected to the monitor at the same time. In this case use both connections, D-sub and BNC. The front panel switch selects source input.

3) Connect video signal cable to the video port of the computer's controller.

4) Insert AC power cord into the monitor and then into an AC power outlet.

5) Before turning on the power to the monitor and computer, check your computer's owner's manual for instructions about turning on equipment connected to the computer. Also, check for any instructions for your video system when using a multi-sync monitor. In some cases, jumper or switch settings may be required for the video board to output extended resolution modes.

6) To turn on the monitor, push the power switch. The power indicator LED will light. To turn the monitor off, push the power switch again. The power indicator LED will also turn off.

3. Connection to your computer (MacintoshII Family)

With the cable adapter, this monitor is compatible with Apple MacintoshII Family, Macintosh LC/LCII /LCIII, Centris, and Quadra series computers. (Please see Page 11 for the pin assignments.)

To attach the monitor to your system, follow these instructions:

1) Turn off the power to the monitor and computer.

2) Connect the cable adapter to the video output port of your video controller. Tighten the screws on the cable adapter.

3) Connect the 9-pin side of the signal cable to the 9-pin D-sub connector on the rear side of the monitor.

4) Connect the 15-pin side of the signal cable to the other end of the cable adapter. Tighten the screws of the signal cable to ensure proper connection.

5) Connect one end of the power cable to the monitor and the other end to the power outlet.

6) Turn on the monitor and the computer.

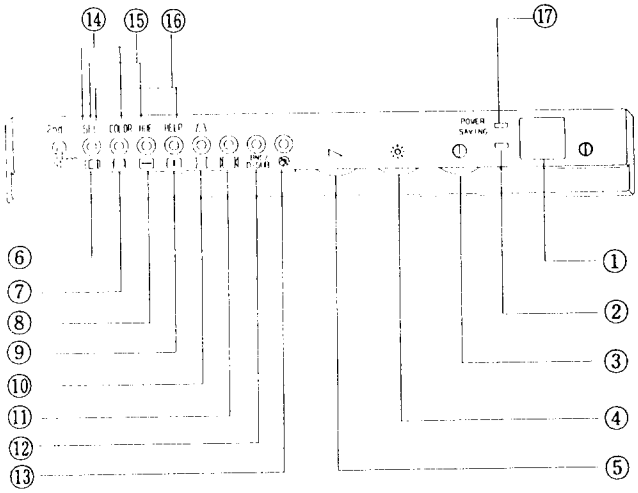
4. Control Location & Functions

4-1. Front View



1	Power Switch
2	Power Indicator (Dual Color)
3	Contrast
4	Brightness
5	Variable
6	Horizontal Position / Select
7	Vertical Position / Color
8	Horizontal Size / Hue
9	Vertical Size / Help
10	Side Pincushion / Trapezoidal
11	Recall
12	BNC / D-Sub
13	Degauss
14	Parallelogram
15	Vertical Linearity
16	Pin Balance
17	Power Saving Indicator

4-2. Basic Controls and LED Indicator Functions

1) Power Switch:

Use to switch monitor power on and off. Push the power switch once to turn monitor power on. The indicator LED glow green. Push the switch again to turn monitor power off.

2) Power Indicator (Dual color):

Green/ Orange

When the monitor is powered on, and no adjustments are being made, the indicator LED glows green. When an adjustment function is selected the indicator LED glows orange.

3) Contrast Control:

Use to adjust the contrast level of the displayed image. Contrast controls the difference between dark and light areas of the displayed image.

4) Brightness Control:

Use to adjust the overall brightness of the displayed image.

The Display Adjustment

Use the Variable adjustment control to adjust the displayed image when a control function is enabled (the indicator's color is orange).
Note : After completing an adjustment the indicator LED will return to short green after 3-4 seconds showing that your adjustment has been saved. The OSD will remain on for about 10 seconds.

5) Variable Adjustment Control:

Turn the Variable adjustment control counterclockwise to decrease the value of the adjustment function. Turn the Adjustment control clockwise to increase the value of adjustment function.

About burn-in mode : You can operate or disable power saving function if you need. In no signal state (video cable is disconnected from this monitor), the indicator's color is orange. Push horizontal position button and the side pincushion button simultaneously before monitor run into power saving mode, the power saving function is disabled and then you can warm up this monitor. This burn-in mode is removed when the power of monitor is off and on again.

Microprocessor Controls & Functions

General Description

The monitor has preset display settings for each of the standard signal timing listed on the timing chart. In other words, the monitor will automatically adjust itself to an optimum size and position when it senses one of the standard signal timing. However, some users wish to adjust the monitor to their preferred setting rather than the factory preset. The microprocessor controlled adjustments will automatically memorize the display settings that you prefer for a specific signal timings and automatically adjust itself when the monitor senses that signal. Up to 11 different timing/settings can be saved. See Page 14, 15 for the standard Signal timing chart.

Control Function Buttons

This monitor incorporates single and multi-function buttons. Single function buttons, when pressed, allow access to one of the control functions. Multi-function buttons can access a second function in addition to the first function. To access the second adjustment function, push the function button twice. Refer to this chart of multi-function buttons that allow access to a second function.

Button No.	PUSH	
	ONCE	TWICE
6	Horizontal Position	Color Select
7	Vertical Position	Color
8	Horizontal Size	Hue
9	Vertical Size	Help
10	Side Pincushion	Trapezoid

On Screen Display

This monitor features an On Screen Display (OSD) that shows information about the display settings to the user. The OSD will appear on the screen when a function button is selected. The OSD will show the name, range, and current setting of that control function. In addition, the OSD will show the current input signal frequency, and the list of factory and user preset timing. The OSD will remain activated approximately 10 seconds after any adjustments are completed.

6) Horizontal Position / Color Select:

First function : Horizontal Position
Press this button once to adjust the horizontal position (centering) of the display.
Use the Variable adjustment control to adjust.

Second function : Color select
Press this button twice to access the color select function. When the function is enabled, the OSD will show " [F] -- [1] -- [2] ".
[F] is the "Factory preset" color [1] and [2] are two addresses that the user can adjust color and then save.
The initial value of [1], [2] is equal to [F]. If you want to change the factory preset color, turn the Variable adjustment control to select user address [1] or [2]

The new color address is automatically saved in two or three seconds. Then select control functions button for "color" and "Hue" and adjust each with the variable adjustment control until the desired color is displayed. Please see the following descriptions for control functions "Color" and "Hue".

Note : It is helpful to refer to a color diagram before making color adjustments. (Please refer to following page)

7) Vertical Position / Color Saturation:

First Function : Vertical Position
Press this button once to adjust the vertical position (centering) of the display.
Use the Variable adjustment control to adjust.

Second Function : Color saturation
Press this button twice to access the color saturation. Saturation (radius) is the distance away from the reference white value (preset at factory not a user control) in the direction of a primary color or color combination. Increasing saturation(radius) results in changing the color away from white and towards vivid concentrations of a color(hue).

8) Horizontal Size / Hue:

First Function : Horizontal Size
Press this button once to adjust the horizontal size (width) of the display. Use the variable adjustment control to adjust.

Second Function : Hue

Press this button twice to access the hue function. Hue (angle) is the term used to define color. Adjusting the hue (angle) determines the color that will displayed. By adjusting the hue(angle) the color can be changed from blue to bluish-green to green and so on. Turn the variable adjustment control to the desired color (hue).

Note : If the color saturation is not increased to a sufficient level, then hue adjustments may not be visible. Please make sure that color saturation is increased in order to see your hue adjustments.

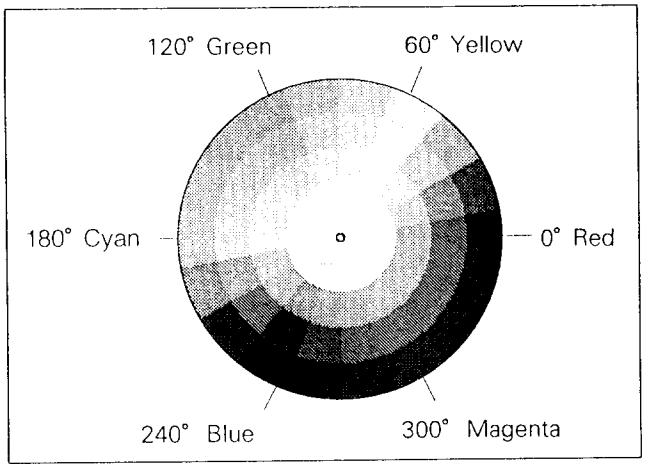
REFERENCE

Color Map



What is the Hue ?
Hue, the property associated with color family, (i.e. red, yellow, purple, etc.) is specified as an angle and ranges from 0° to 359°, with red at 0°, by convention.

What is the Saturation ?
Saturation describes the vividness of color or its variation from white to the most vibrant Hue (100).

9) Vertical Size / Help:

First Function : Vertical Size

Press this button once to adjust the vertical size(height) of the display. Use the variable adjustment control to adjust.

Second Function : Help

Press this button twice to access the help function. The OSD will show the contents of the factory preset timing modes and user modes. Use the variable adjustment control to "page" through the list.

Note: Don't push this button longer than 7 seconds continuously. If then, this operation resets all of the data in the user memory area.

10) Side Pincushion / Trapezoid:

First Function : Side Pincushion

Press this button once to adjust the vertical sides of the display from bowing in (pincushion) or bowing out (barrel distortion.) Turn the variable adjustment control until the vertical sides are straight.

Second Function : Trapezoid

Press this button twice to access the trapezoid distortion function. Use the variable adjustment control to correct any trapezoid (keystone-like) distortion of the display.

11) Recall:

Use this button to recall factory preset settings. When the recall button is pushed, the indicator LED will change color from green to orange (the same as any other function) and the OSD will appear.

Keep pressing the recall button for 2-3 seconds until the indicator LED's color is changed to green which indicates that the factory settings for that timing have been recalled. The OSD will show the progress of the recall function.

Note: This operation resets all of the data in the user memory area for the current signal timing.

12) BNC / D-SUB:

BNC/ D-SUB

Use this button to select signal sources connected to the BNC and D-sub connector inputs. An active signal(horizontal and vertical sync) must be connected to both inputs in order to use this switch function.

13. Degauss:

Magnetic fields can build up on the CRT and cause color impurity. Use the DEGAUSS button to demagnetize the CRT. Push the button once to activate the degaussing circuit. The degaussing circuit automatically turns itself off after a few seconds.

14) Parallelogram:

To activate the parallelogram adjustment function press "the Horizontal position/ Color Select" button and "the Vertical position/ Color" button simultaneously for 4-5 seconds.

15) Vertical Linearity:

To activate the vertical linearity adjustment function press the "Horizontal Position / Color Select" button and the "Horizontal Size/ Hue" button simultaneously for 4-5 seconds.

16) Pin Balance:

To activate the pin balance adjustment function press the "Horizontal Position/Color Selet" button and the "Vertical Size/Help" button simultaneously for 9-10 seconds.

5. Option Power Management Circuit (Power Saving Function)

If your computer system features a display power management function, this monitor, when signaled, will enter power saving modes. The purpose of power management is to automatically reduce power consumption when the computer system is not in use. This monitor can enter 3 different power saving modes as described below.

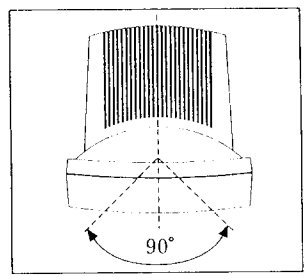
Table: Display Power Management Signaling (DPMS) Standard

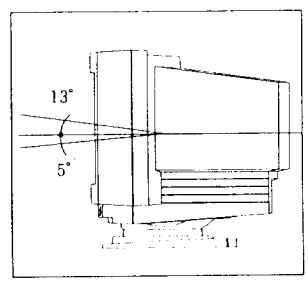
State / Sync	Normal Operation	Power Saving Function Mode		
		Stand-by mode	Suspend mode	Power-Off mode
Horizontal Vertical Video	Active Active Active	Inactive Active Blanked	Active Inactive Blanked	Inactive Inactive Blanked
Remark (LED Color)	Green	Orange	Orange/Green Blinking (0.5 Sec interval)	Orange Blinking (1 Sec interval)
Power Consumption	130 W (Max)	110 W (Max)	Less than 30 W	Less than 8 W

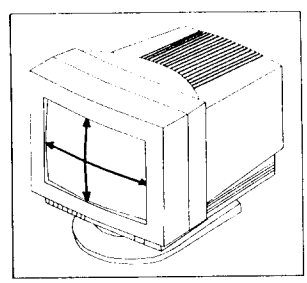
Note: This monitor automatically returns to normal operation state when horizontal and vertical sync rare detected.
When you turn power off in power-off mode, LED indicator may continuously blink on-off about for 4 to 5 seconds.

6. Use of the tilt-swivel

With the tilt-swivel, this unit can be adjusted to be viewed at your desired angle within 90° will the swivel and 18° with the tilt.
To turn the unit horizontally, hold it at its bottom with your both hands as illustrated below.







7. Signal Connections and Pin Assignments

1) BNC Connectors

BNC connectors are used with coaxial cable for improved signal transmission. Improved signal transmission becomes critical at high frequencies such as those required for 1280x1024 resolution. Most video boards that operate at 1280x1024 resolution recommend using coaxial cable with BNC connectors. The 5 BNC connectors on the rear of the monitor can accept Red, Green, and Blue video. Composite sync can be applied separately, or combined with the Green video signal (commonly referred to as "composite sync on green"). If composite sync on green is used, then only 3 of the 5 BNC connectors are used. The connectors are labeled accordingly.

BNC Signal Input (Type: Figure 1)

Pin Assignment	Signals		
	Sync on Grgeen	Composite H/V	Separate H/V
1	Red	Red	Red
2	Green+Sync	Green	Green
3	Blue	Blue	Blue
4	Not Used	H/V Sync	Horizontal Sync
5	Not Used	Not Used	Vertical Sync

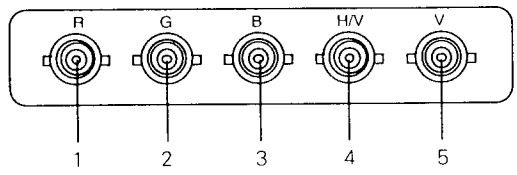


Figure 1

2) D-SUB Connectors

Sync Type / Pin No.	9 Pin Side of the Signal Cable (Figure 2)			15 Pin Side of the Signal Cable (Figure 3)			Cable Adapter (Figure 4)
	Separate H/V	Composite H/V	Sync on green	Separate H/V	Composite H/V	Sync on green	Apple MACII

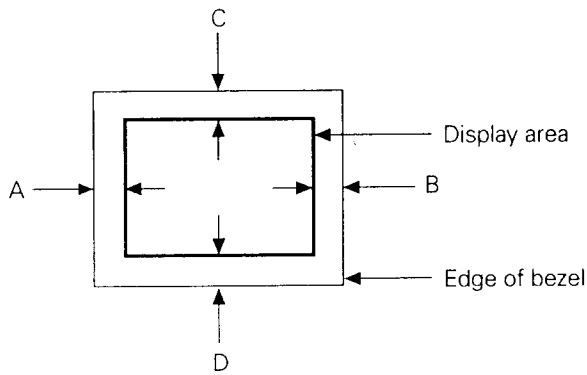
DISPLAY PERFORMANCE

1. Display Area

1) Width : 340 ±3 mm (5:4 ratio).
360 ±3 mm (4:3 ratio).
2) Height : 270 ±3 mm.

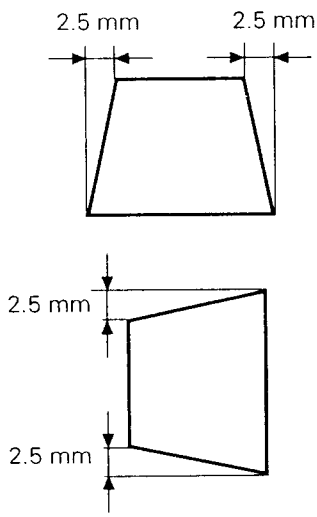
2. Centering

| A - B | ≤ 6.0 mm.
| C - D | ≤ 6.0 mm.

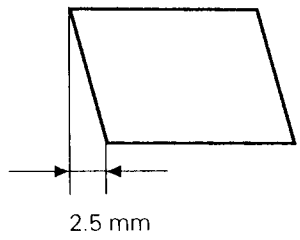


3. Distortion

1) Trapezoid

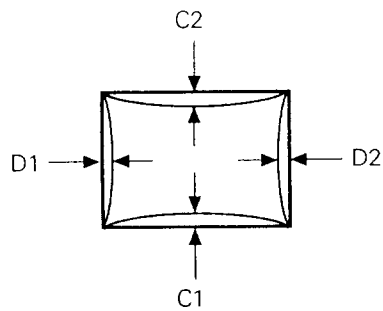


2) Parallelogram



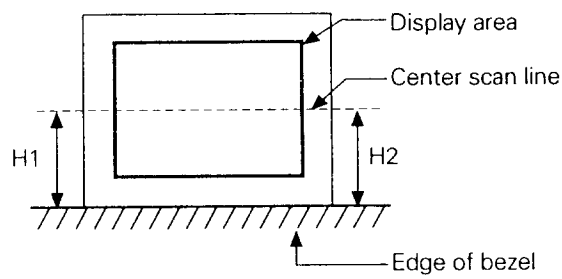
3) Pincushion

| C1 |, | C2 | ≤ 2.5 mm.
| D1 |, | D2 | ≤ 2.5 mm.



4) Rotation

| H1 - H2 | ≤ 2.0 mm.



DISPLAY PERFORMANCE

4. Linearity

1) Standard Mode : 77kHz/72 Hz, 56 kHz/70 Hz.

Horizontal Linearity (HL) :

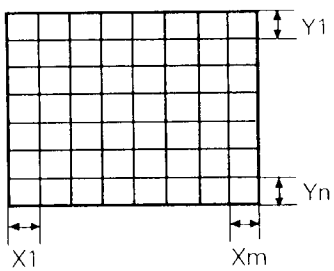
$$\frac{Xmax - \overline{X}}{\overline{X}} \times 100 \text{ or } \frac{\overline{X} - Xmin}{\overline{X}} \times 100 \leq 5\%$$

Vertical Linearity (VL) :

$$\frac{Ymax - \overline{Y}}{\overline{Y}} \times 100 \text{ or } \frac{\overline{Y} - Ymin}{\overline{Y}} \times 100 \leq 5\%$$

2) Other Modes

HL, VL $\leq$ 7% for Other Mode : VGA, XGA2, 37kHz, 48kHz, XGAII, 64kHz.



m=16
n=12

3) Conditions

Display image : Crosshatch pattern
Maximum and minimum values should not be adjacent to each other.

Xmax is maximum value among X1 ~ Xm
Xmin is minimum value among X1 ~ Xm

$$\overline{X} = \frac{X1 + X2 \ldots\ldots Xm}{m} \quad (m=16)$$

Ymax is maximum value among Y1 ~ Yn
Ymin is minimum value among X1 ~ Yn

$$\overline{Y} = \frac{Y1 + Y2 \ldots\ldots Yn}{n} \quad (n=12)$$

5. Brightness Uniformity

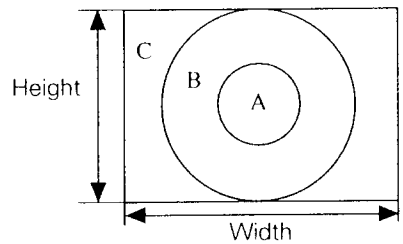
Value	70% (Min) Variation = $\frac{C}{A} \times 100$
Conditions	Display Image : White flat field. Luminance : 20 F/L at the center of display area. A : Luminance at position of the highest. C : Luminance at position of lowest brightness.

6. Color Point

Value	9300° K. X = 0.283 ±0.02, Y = 0.298 ±0.02.
Conditions	Display Image : White flat field at the center of display area. Luminance Min : 5 F/L, Max : 20 F/L.

7. Misconvergence

Center area of display ("A" circle is 270 mm) (A) : 0.3 mm.
Peripheral area of display (B) : 0.5 mm.



1) Conditions
Display Image : Crosshatch pattern mixed with R,G,B colors.

8. Purity

Conspicuous mislanding shall not be visible within display area at distance of 50 cm from CRT surface.

1) Conditions
Display image : White flat field.
Luminance : 15 F/L at the center of display area.

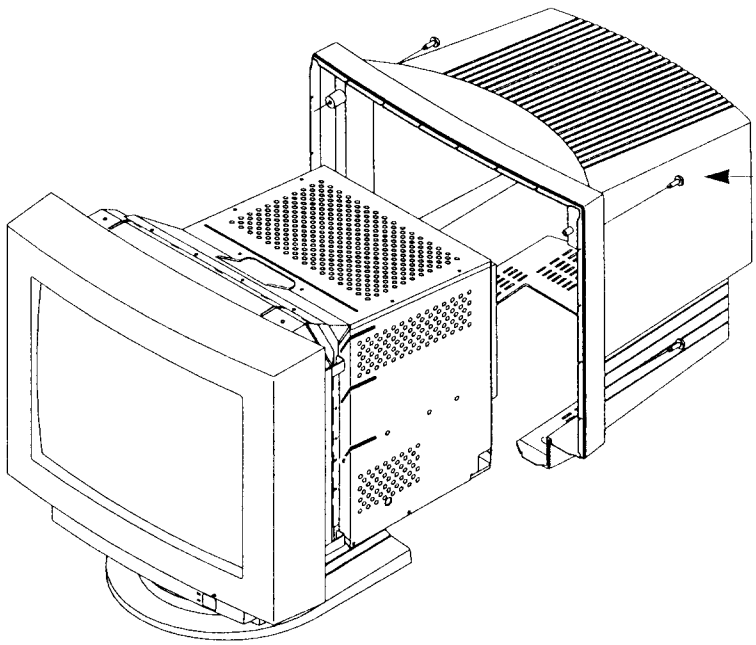
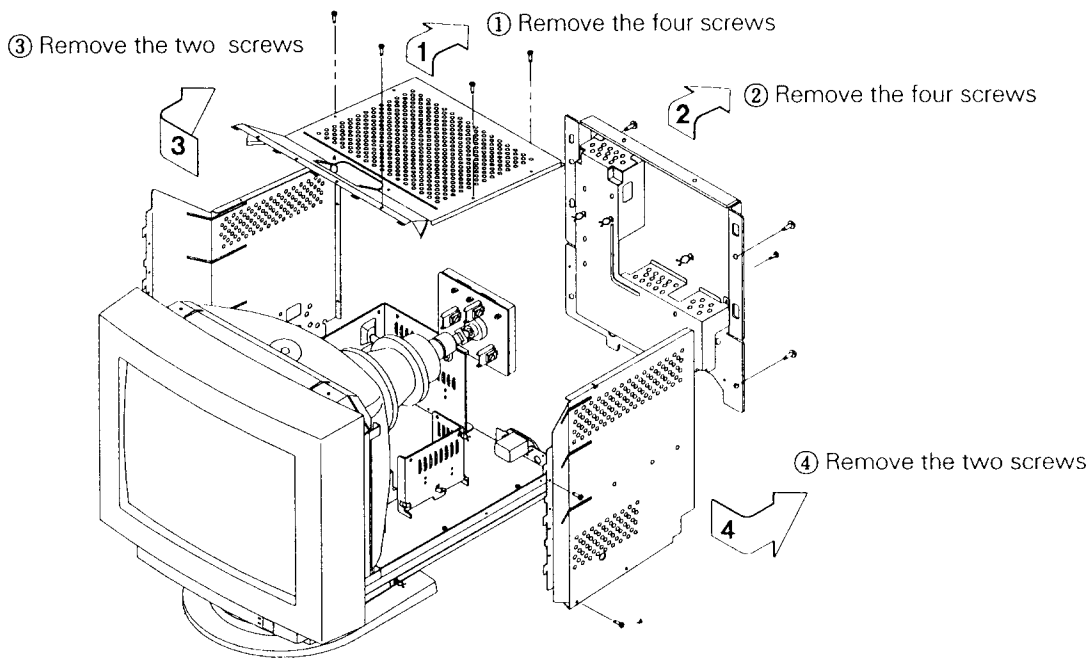
DISASSEMBLY

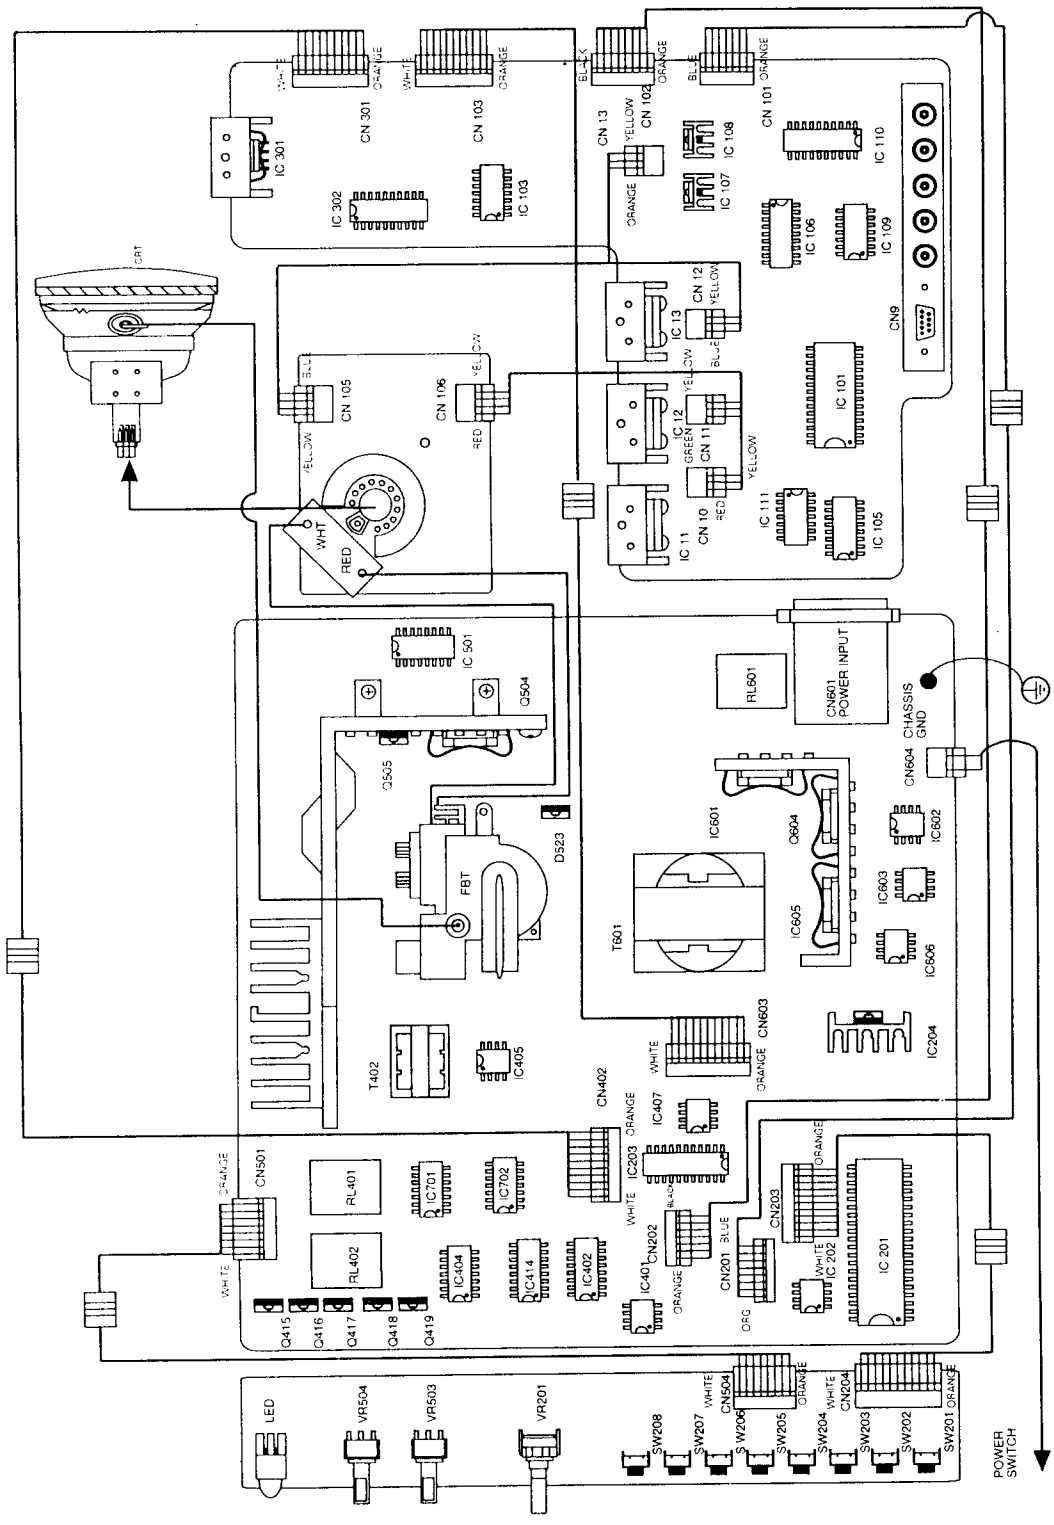
1. Stand & Cabinet Removal



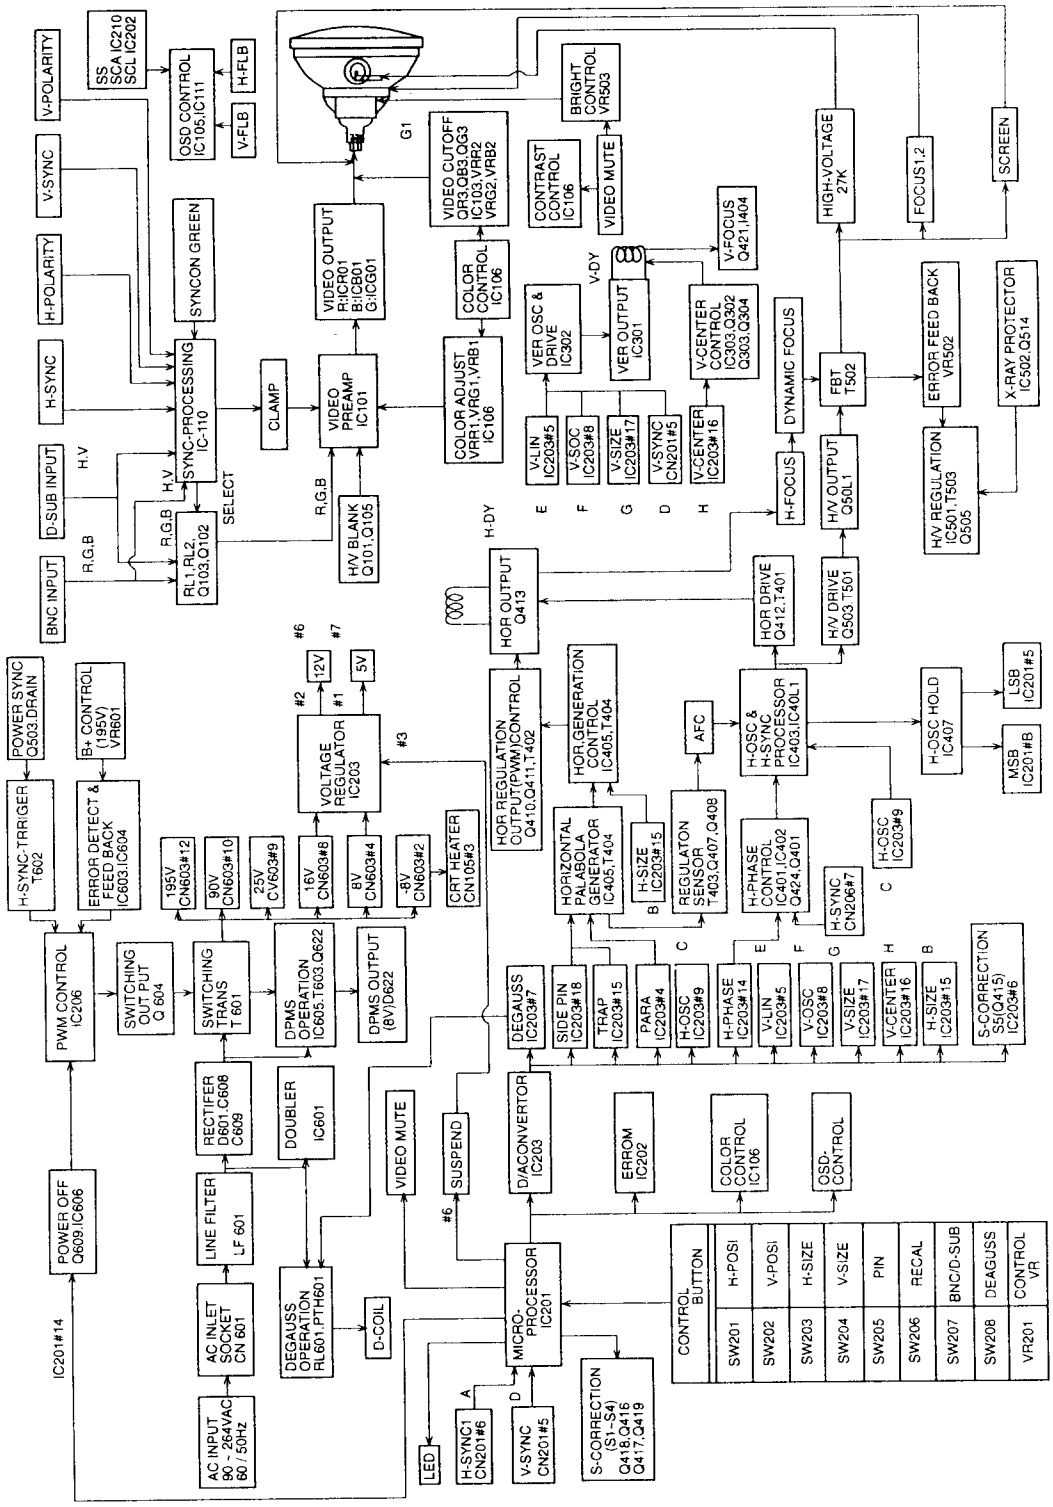
2. Bottom Shield Removal



WIRING DIAGRAM



BLOCK DIAGRAM



ALIGNMENT PROCEDURE

1. Adjustment Conditions and Precautions

1) Power supply voltage
AC 100-120/220-240 volt (60/50 Hz).

2) Warm up time
The display must be on for 30 minutes before starting alignment. This is especially critical in color temperature and white balance adjustments.

3) Signal
Video analog 0.714 Vp-p positive at 75 ohm terminated.

SYNC On Green	:	Video 0.714 Vp-p positive.
	:	SYNC 0.286 Vp-p negative.
SYNC	:	TTL level negative/positive, separate , composite.

4) Scanning frequency

Horizontal	:	30 kHz-82 kHz (Automatic).
Vertical	:	50 Hz-120 Hz (Automatic).

Unless otherwise specified, adjust at 1280x1024 (f_H: 76.9 kHz, fv: 72 Hz) signals.

CAUTION

☞ Alignment procedure without micom control jig: You can do adjust this step after set the monitor to the burn-in mode. (See Page 7)

☞ Alignment procedure with micom control jig: Before doing below steps,

① Apply standard timing (1280x1024/72 Hz) to a monitor.
② Keep pressing button #㉗ (Select Monitor Type) until below messages are appeared on LCD panel.

MANUAL - CONTROL
20" H - SAMSUNG

③ Press a button #㉔ (Memory Data Dump) on the Micom control jig to call the data of the all mode based 1280x1024/72 Hz.
④ Please refer to block diagram of the Micom control jig on the Page 21.

2. Main PWB Prepare Adjustment

1) · +B 195V Line adjustment
Adjust VR601 to be DC 195 ±1 V at 195V test point and GND. (No Beam Contrast: MIN, Brightness: MIN)

2) High voltage control
Adjust VR501 to be 27.0 kV ±0.5 kV.
(No Beam Contrast: MIN, Brightness: MIN)

3. Main PWB Adjustment

- Unless otherwise specified, adjust the EXT-VR
VR504 (Contrast) : MAX (Fully clockwise).
VR503 (Brightness) : MAX (Fully clockwise).

- Apply standard timing (76.9 kHz/72 Hz) to the monitor.

1) Horizontal Raster Center
Adjust SW401 so that the position of back raster move to center when signal of 81.1 kHz/76 Hz is applied.

2) Vertical Linearity

- Alignment procedure without micom control jig:
Push the horizontal position button and the horizontal size button simultaneously for 4-5 seconds to activate the vertical linearity adjustment function. Use the variable adjustment control.

- Alignment procedure with micom control jig:
Push vertical linearity up button (#⑮ button) or vertical linearity down button (#⑯ button) so that the image or pattern becomes optimum.

3) Horizontal Position Adjustment

- Adjustment procedure without micom control jig:
After pushing the Horizontal Position button, adjust variable adjustment control so that the image (or the test pattern) is placed on the center of the raster.

- Adjustment procedure with micom control jig:
Push Horizontal Position Up button (#① button on the Micom Control Jig) or Horizontal Position Down button (#② button) so that the image (or the test pattern) is placed on the center of the raster.

4) Vertical Position Adjustment

- Alignment procedure without micom control jig:
After pushing the Vertical Position button, adjust variable adjustment control so that the image (or the test pattern) is placed on the center of the raster.

- Alignment procedure with micom control jig:
  Push Vertical Position Up button (#⑤ button) or Vertical Position Down button (#⑥ button) so that the vertical image or pattern is placed on the center of the raster.

5) Horizontal Size Adjustment

- Alignment procedure without micom control jig:
  After pushing the Horizontal Size button, adjust variable adjustment control so that the horizontal width of the displayed pattern becomes 360 mm. (The tolerance is ±3 mm)

- Alignment procedure with micom control jig:
  Push Horizontal Size Up (#④ button) or Horizontal Size Down button (#③ button) so that the horizontal width of the displayed pattern becomes 360 mm. (The tolerance is ±3 mm)

6) Vertical Size Adjustment

- Alignment procedure without micom control jig:
  After pushing the Vertical Size button, adjust variable adjustment control so that the vertical size of the displayed pattern becomes 270 mm. (The tolerance is ±3mm)

- Alignment procedure with micom control jig:
  Push Vertical Size Up button (#⑦ button) or Vertical Size Down (#⑧ button) so that the vertical image or pattern becomes 270 mm. (The tolerance is ±3 mm)

7) Side Pincushion Adjustment

- Alignment procedure without micom control jig:
  After pushing the Side Pincushion button, adjust variable adjustment control so that each side of the pattern (or the image) becomes straight.

- Alignment procedure with micom control jig:
  Push Side Pincushion Up button (#⑨ button) or Side Pincushion Down button (#⑩ button) so that each side of the pattern or image becomes straight.

8) Parallelogram Adjustment

- Alignment procedure without micom control jig:
  Keep pressing the Horizontal Position button and Vertical Position button simultaneously for 4-5 seconds to active the parallelogram function. Use the variable adjustment control.

- Alignment procedure with micom control jig:
  Push Parallelogram Up button (#⑬ button) or Parallelogram Down button (#⑭ button) so that the image or pattern becomes to rectangular.

9) Trapezoid Adjustment

- Alignment procedure without micom control jig:
  Push Side Pincushion button twice to access the trapezoid distortion function. Use the variable adjustment control to correct any trapezoid distortion of the display.

- Alignment procedure with micom control jig:
  Push Trapezoid Up button (#⑪ button) or Trapezoid Down button (#⑫ button) so that the image or pattern becomes to rectangular.

10) To save the picture data to a monitor

- Alignment procedure with micom control jig:
  To save the picture data of a mode, push Standard Save button. (#㉓ button on the Micom control)

11) To save the picture data of all factory preset mode

- Alignment procedure with micom control jig:
  If you finished above adjustment when standard timing (76.9 kHz/72 Hz) is applied to the monitor, push All Mode Save button (#㉕ button on the micom control), then micom save calculated picture data (based on standard timing) of 16 modes including 12 factory preset modes.

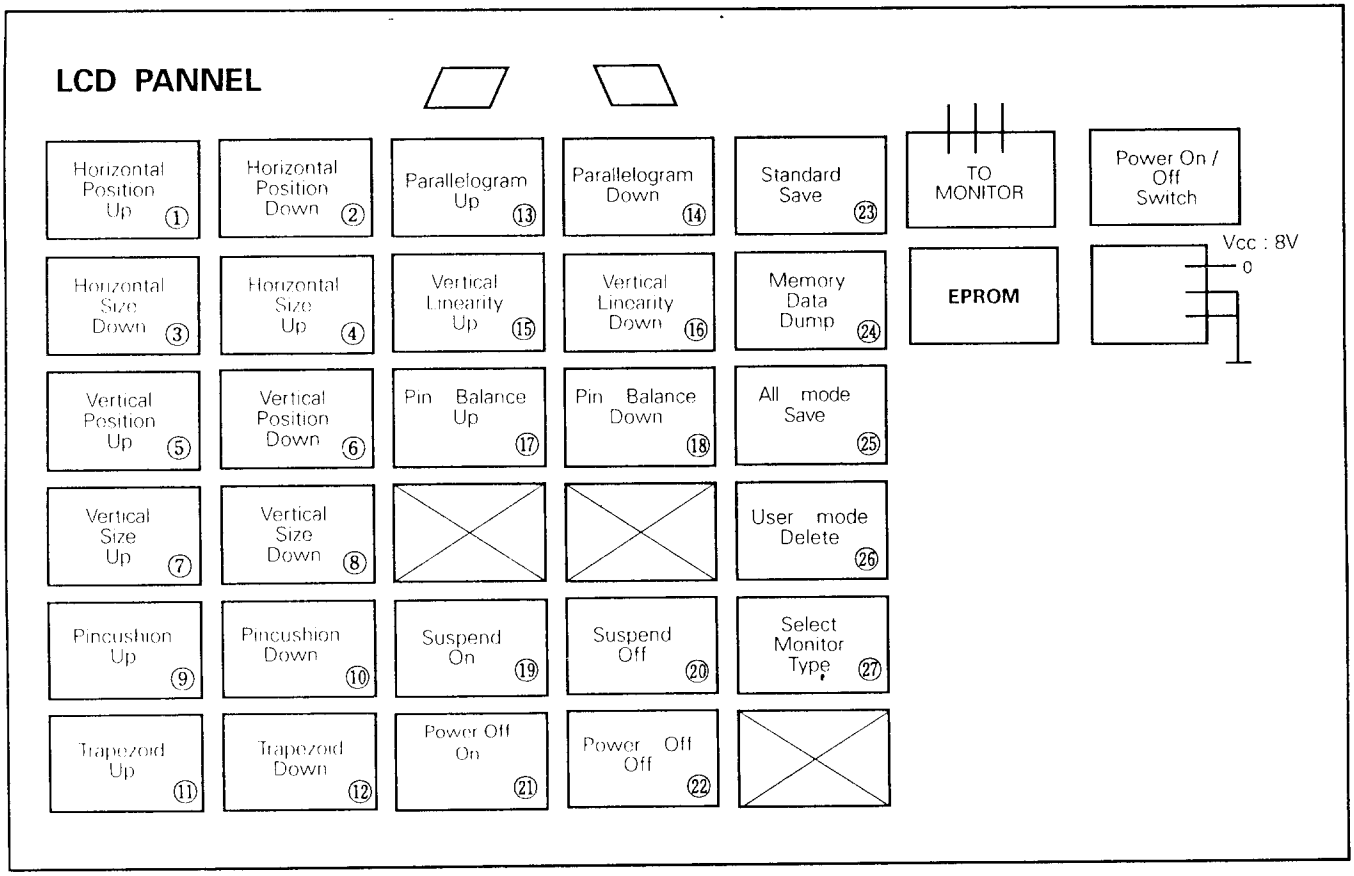
12) Pin Balance

- Alignment procedure without micom control jig:
  Push the horizontal position button and the vertical size button simultaneously for 9-10 seconds to activate the pin balance adjustment function use the variable adjustment control.

- Alignment procedure with micom control jig:
  Push Pin Balance up button (#⑰ button) or Pin Balance down button (#⑱ button) so that the image or pattern becomes to rectangular.

You just finished adjustment at standard timing (76.9 kHz/72 Hz). If you want to adjust other modes, you can do it by following above step from (3) to (11), not to (12).

The Block Diagram of the Micom control Jig (Alignment Procedure with micom control jig)



Note:

1) Standard save button (#㉓ button)
   - To save the picture data of a mode individually.
2) All mode save button (#㉕ button)
   - To save the picture data of all mode (16 modes) referring standard mode (1024x768/75 Hz).
3) Memory data dump button (#㉔ button)
   - To call the standard picture data from EPROM on the Micom Control Jig.
4) User mode delete button (#㉖ button)
   - To delete the data in the user mode. (Saved by a user)
5) Select monitor type button (#㉗ button)
   - To select the picture data which be dumped from EPROM on the Micom Control Jig by a CRT. Keep pressing for 2 seconds.
6) Suspend mode test button (#⑲, #⑳ buttons)
   - To test the suspend function among the power management function.
   - Push suspend on button (#⑲ button), then the monitor becomes to suspend mode.
   And push suspend off button (#⑳ button), then the monitor returns to normal operation status.
7) Power-Off mode test button (#㉑, #㉒ buttons)
   - To test the Power-Off function among the power management function.
   - Push Power-Off On button (#㉑ button), then the monitor becomes to Power-Off mode, and push Power-Off Off button (#㉒ button), then the monitor returns to normal operation status.

4. Adjustment of Video PWB

Note: Before performing this adjustment procedure, check that the video signals are as follows.

Video : Analog 0.714 Vp-p (at 75Ω Terminated).
SYNC : Synchronizing : Separate TTL level.
Unless otherwise specified,
use signal 1280x1024/72 Hz for the adjustments.

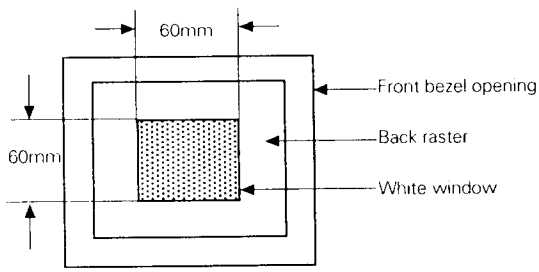
4-1. Adjustment of video amplitude and white balance of back raster

Locate VRR1 (R-Gain), VRG1 (G-Gain), VRB1(B-Gain) controls on the video PWB to mechanically center position. Locate VRR2 (R-Bias), VRG2 (G-Bias), VRB2 (B-Bias) controls on the video PWB to mechanically center position.

4-2. Video Contrast Adjustment

Adjust of gain control (76 kHz)
(White window pattern)

1) Display the white window pattern(within a range for which the ABL circuit does not active even though maximum contrast is set) preferably with video area of 60x60mm approminately.



2) Turn brightness controls fully clockwise and turn the contrast controls fully counterclockwise.

3) Adjust the screen VR of FBT so that the brightness of back raster is to be 0.3 to 0.6 Ft/L. (Typically 0.5 Ft/L)

4) Adjust the VRR2(R-Bias), VRB2(B-Bias) so that the back raster color is white.
(X=0.283 ±0.02 , Y=0.298 ±0.02)

5) Turn the contrast controls fully clockwise and turn the brightness controls fully counterclockwise.

6) Adjust the VRR1 (R-Gain), VRB1 (B-Gain) so that the video is to be white. (X=0.283 ±0.02 , Y=0.298 ±0.02)

7) Turn the contrast and the brightness controls fully clockwise.

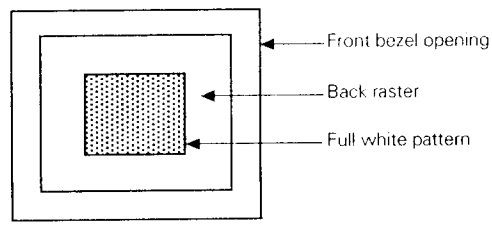
8) Adjust the sub-contrast (VR3) so that the brightness of white window is to be 45 Ft/L.

9) And check whether the white window of video meets the above coordinate SPEC and brightness (over 45 Ft/L) or not.

10) If the white balance and brightness is off for the above SPEC, re-adjustment must be done. (Following above procedure again)

4-3. Adjustment of White Balance of Video

1) Display a full white pattern.



2) Turn the contrast and the brightness controls fully clockwised.

3) Adjust the ACL VR (VR502) controls on the main PWB so that the brightness of video is to be about 27 ±1 Ft/L.

4-4. Fine Adjustment of White Balance

Note : White coordinate (X=0.283 ±0.02, Y=0.298 ±0.02)
Do not touch VRG1 (G-Gain)

1) Display the full white pattern.

2) Turn the contrast control so that the brightness of video is to be about 5 Ft/L.

3) And check whether the white coordinate of video meets the above coordinate SPEC or not.

4) For the contrast control so that the brightness of video is about 15 Ft/L.

5) Check whether the white coordinate of video satisfy above SPEC or not.

6) If the white balance is off for the above SPEC, re-adjustment must be done. (Following above procedure again)

5. Focus Adjustment

1) Display the character pattern so that adjust the focus can be done. (the highest resolution is recommended)

2) Turn the contrast and the brightness controls fully clockwised.

3) Adjust focus of center area using fcus control marked "V" first, then focus of coner area using focus control marked "H" later. For better focus condition, repeat above adjustment again.

6. Purity Adjustment

1) Be sure that the display is not exposed to any external magnetic fields.

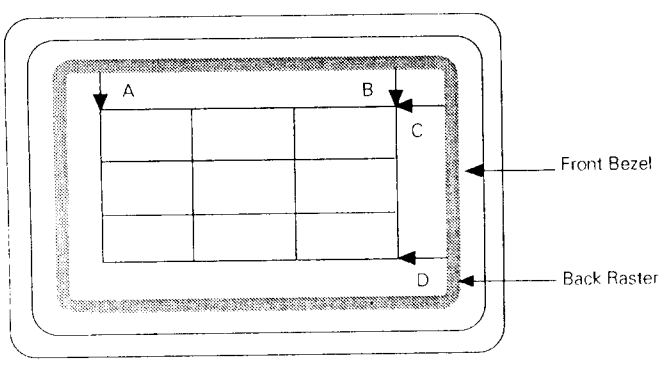
2) Ensure that the spacing between the purity convergence magnet (PCM) assembly and the CRT stem is 29 mm ±1 mm

3) Produce a complete, red pattern on display. Adjust the purity magnet rings on the PCM assembly to obtain a complete field of the color red. This is done by moving the two tabs in such a manner that they advance is an opposite direction but at the same time to obtain the same angle between the two tags, which should be approximately 180°.

4) Check the complete blue and complete green patterns to observe their respective color purity. Make minor adjustment is needed.

7. CRT Tilt Adjustment

Reassembly the CRT with fastening screws so that the simension A, B and C, D are separately equal.



8. Static(Center) Convergence

Switch the monitor on and warm up for 15 minutes. Operate the computer in such a way that the cross hatch pattern is displayed on screen. Convergence error should not be over than following table.

Position	Error In (mm)	CRT Dot Pitch
Center	0.3	0.28
Corner	0.5	0.28

Proceed as follows:

1) Locate the pair of four pole magnet rings.

2) Rotate the individual rings (change spacing between tabs) to converge the vertical red and blue lines.

3) Rotate the pair of rings (maintaining spacing between tabs) to converge the horizontal red and blue lines.

4) After completing the red and blue center convergence, locate the pair of six pole magnet ring.

5) Rotate the individual rings (change spacing between tabs) to converge the vertical red and blue (magenta) and green lines.

6) Rotate the pair of rings (maintaining spacing between tabs) to converge the horizontal red and blue (magenta) and green lines.

7) Magnet position is 2 pole/4 pole/6 pole (from the front of CRT).

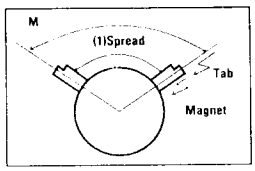
8) Don't rotate the 2 pole magnet because it's object is to adjust the purity.

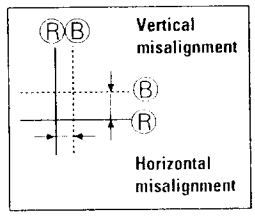
9. Dynamic Convergence

Dynamic convergence (convergence of the three color fields at the edge of the CRT screen) is accomplished by the proper insertion and positioning of the three wedges between the edge of deflection yoke and the funnel of the CRT.

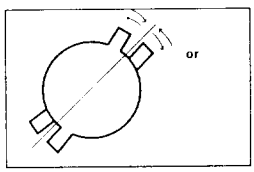
9-1. Alignment of (R) and (B) with the 4pole magnet

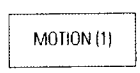
Movable in spread condition

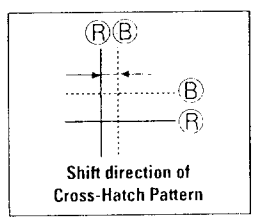




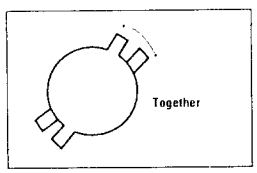
Vertical direction

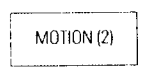


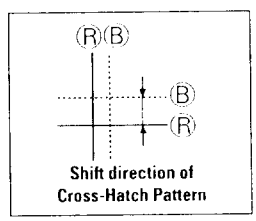




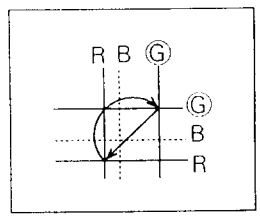
Horizontal direction

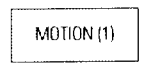


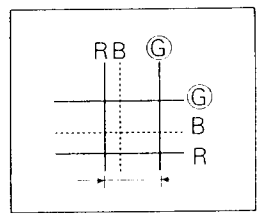


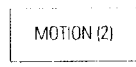


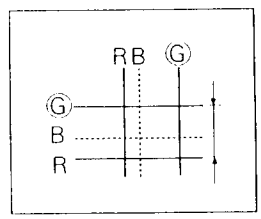
9-2. Alignment of (R) and (B) with (G) (6 pole magnet)



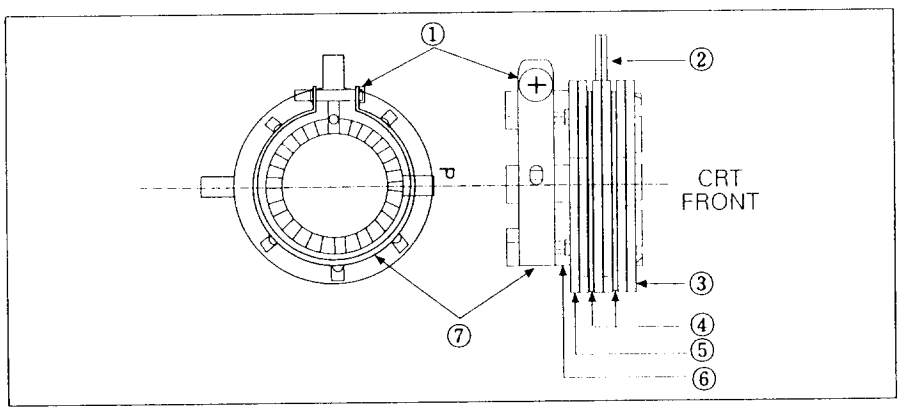








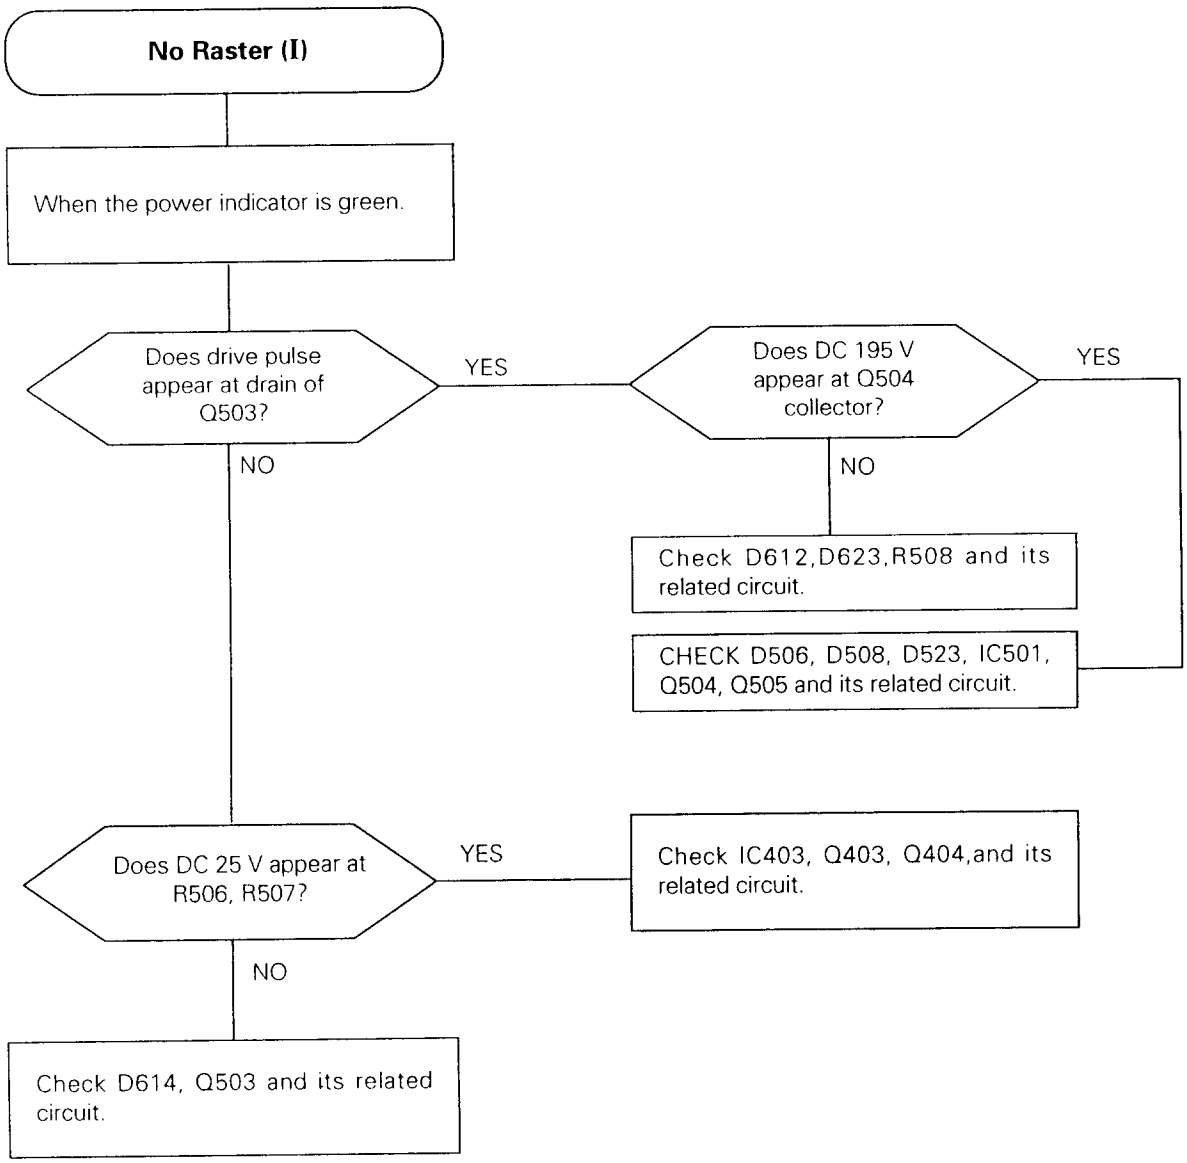
9-3. Convergence Purity Magnet

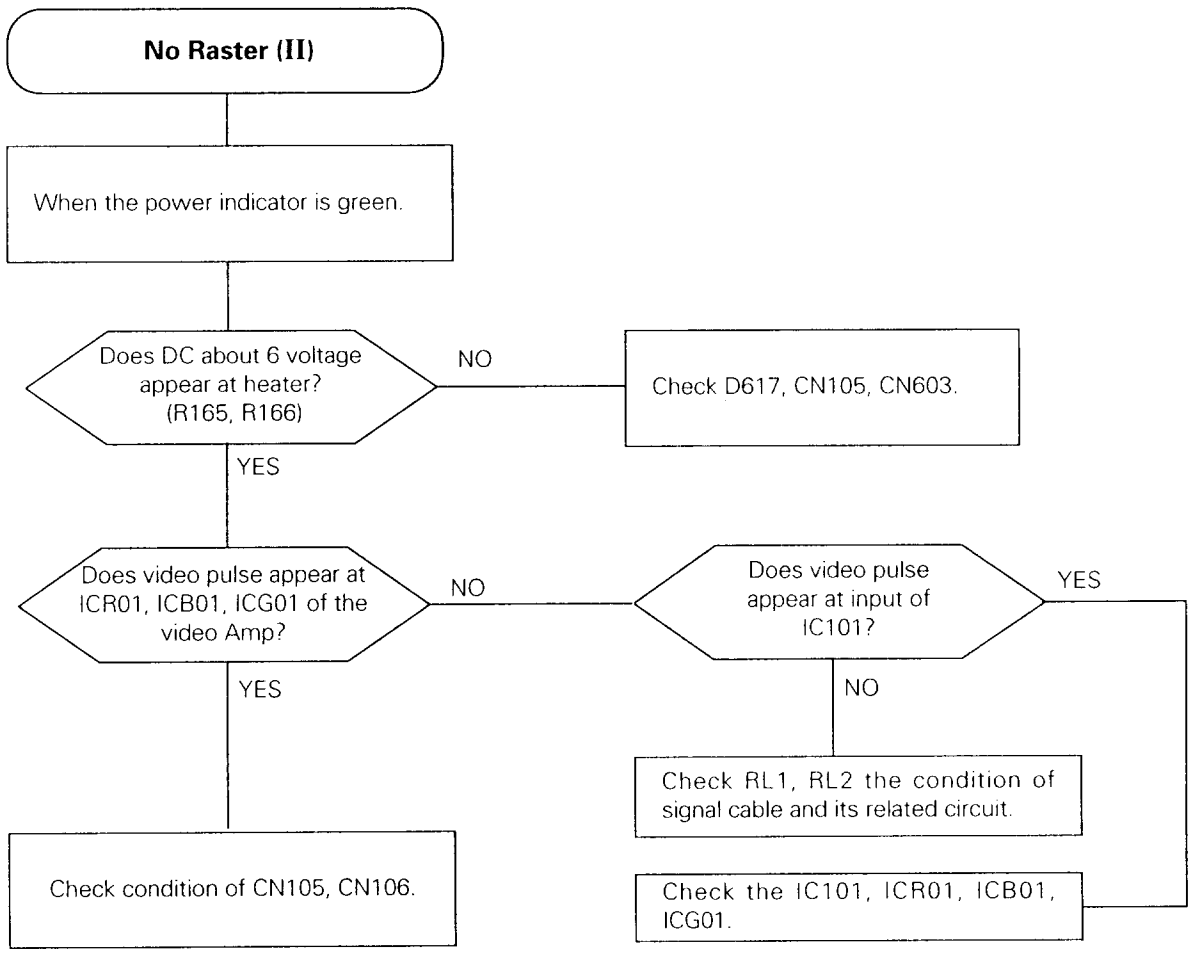


① Setup Bolt	② 4-Pole Magnet	③ Purity Magnet	④ Spacers
⑤ 6-Pole Magnet	⑥ Holder	⑦ Band	

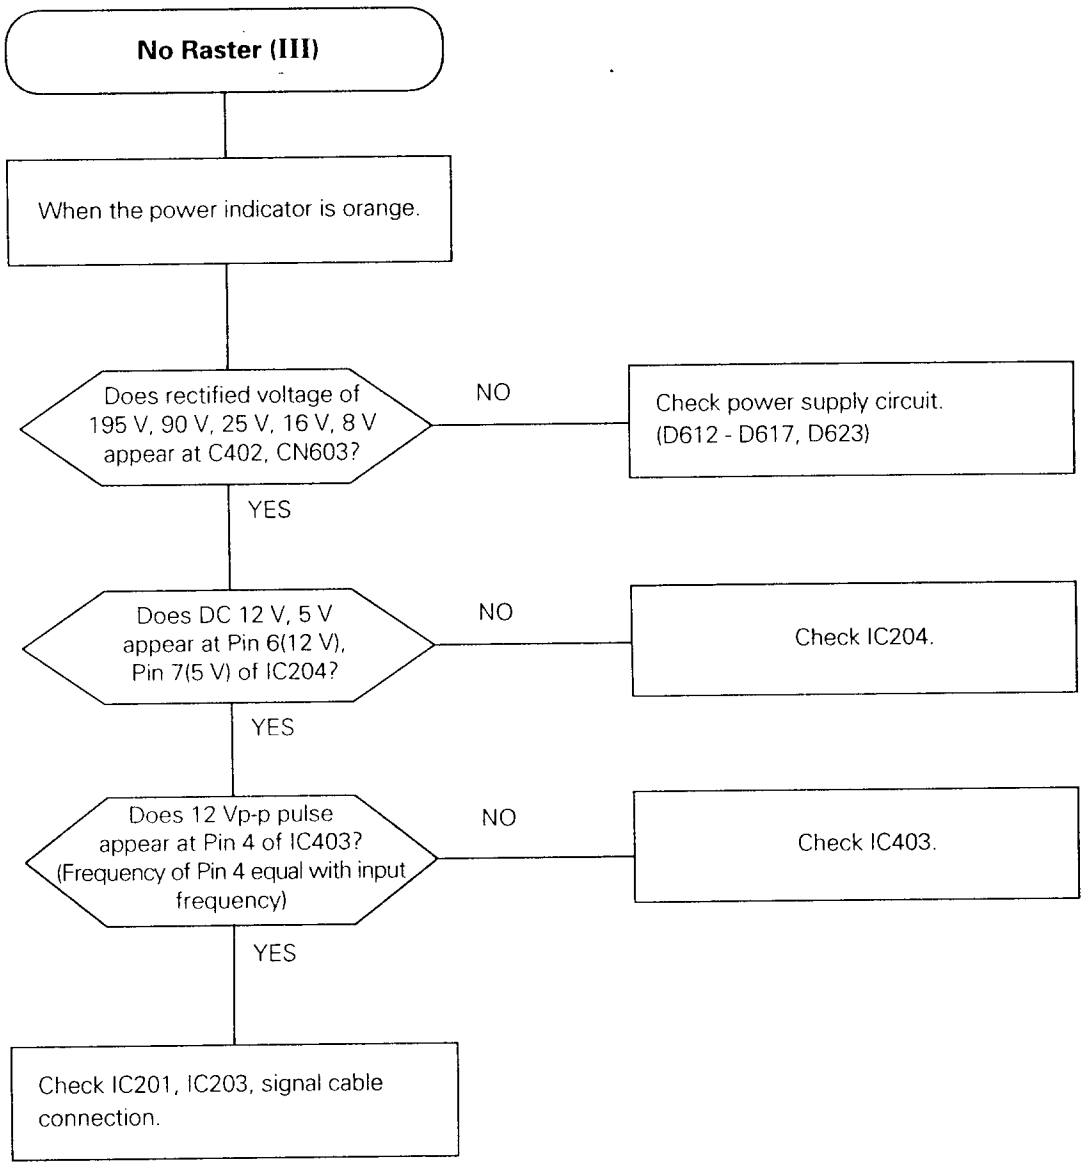
Note :

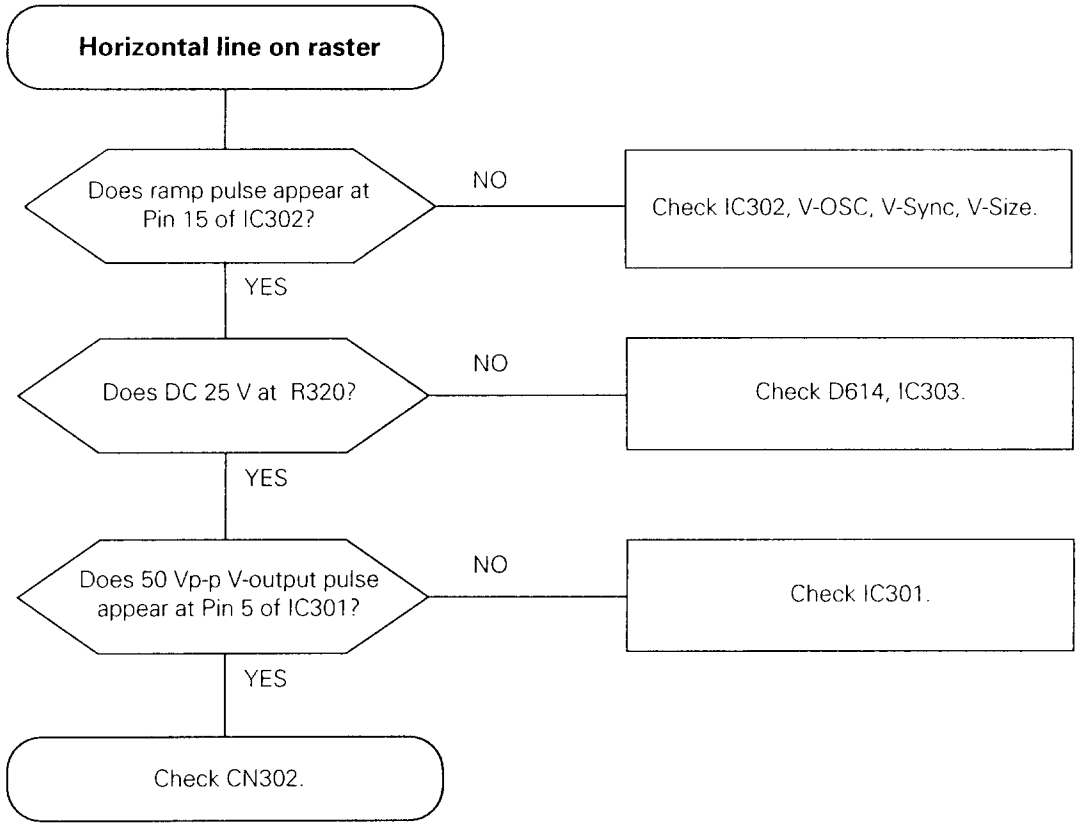
1. If picture does not appear, fully rotate the brightness and contrast control clockwise before inspection.
2. Circuit to be checked
   - ① No raster appears : Power circuits, Horizontal output circuits.
   - ② A high voltage develops but no raster appears : Video output circuits.
   - ③ A high voltage is not developed : Horizontal output circuits.



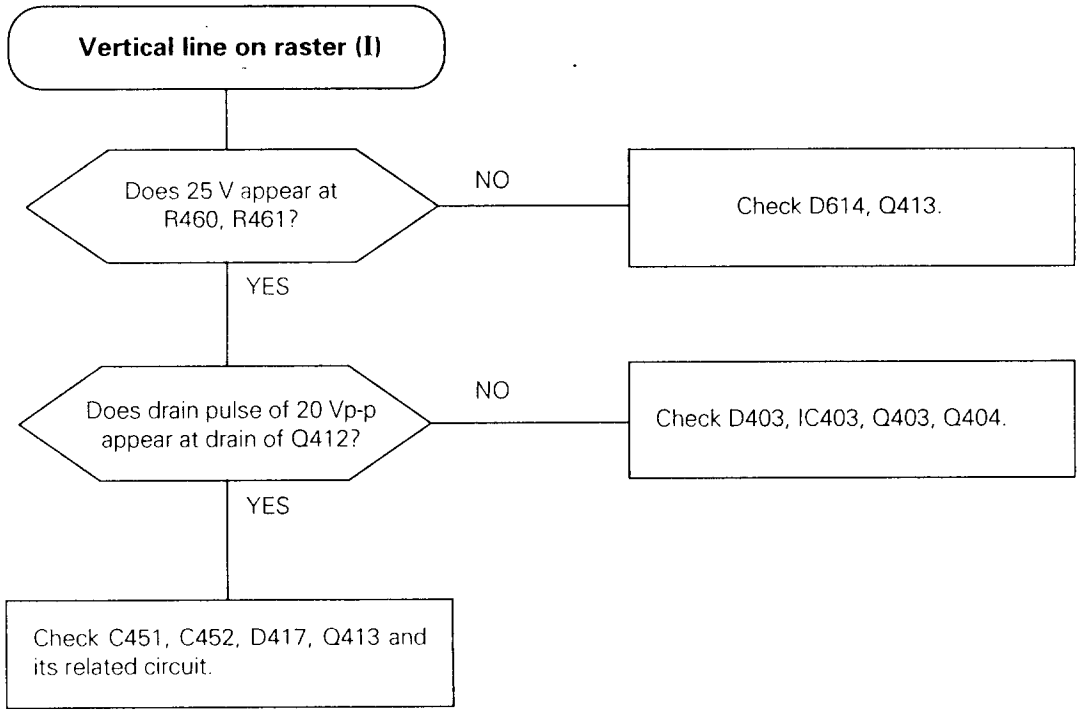


No Raster (II)
When the power indicator is green.
Does DC about 6 voltage appear at heater? (R165, R166)
NO
Check D617, CN105, CN603.
YES
Does video pulse appear at ICR01, ICB01, ICG01 of the video Amp?
NO
Does video pulse appear at input of IC101?
YES
YES
NO
Check RL1, RL2 the condition of signal cable and its related circuit.
Check condition of CN105, CN106.
Check the IC101, ICR01, ICB01, ICG01.

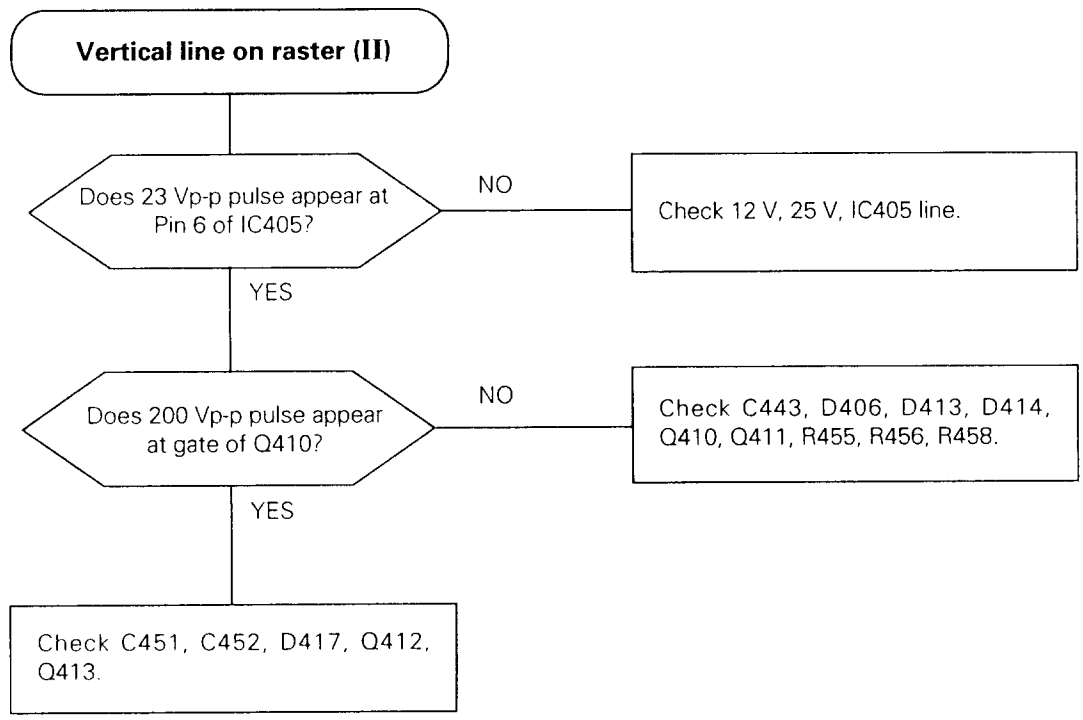




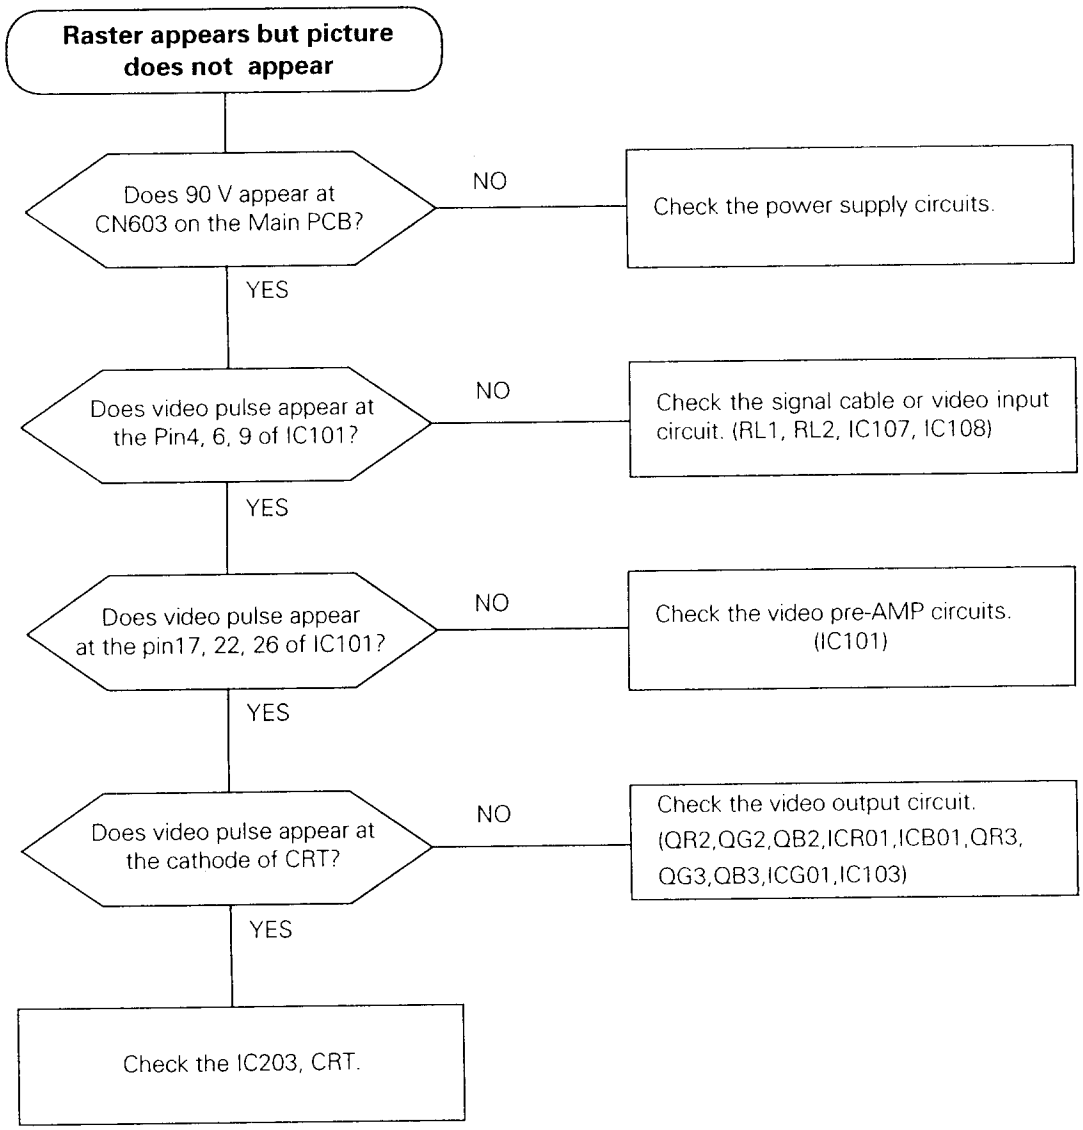
Horizontal line on raster
Does ramp pulse appear at Pin 15 of IC302?
NO
Check IC302, V-OSC, V-Sync, V-Size.
YES
Does DC 25 V at R320?
NO
Check D614, IC303.
YES
Does 50 Vp-p V-output pulse appear at Pin 5 of IC301?
NO
Check IC301.
YES
Check CN302.



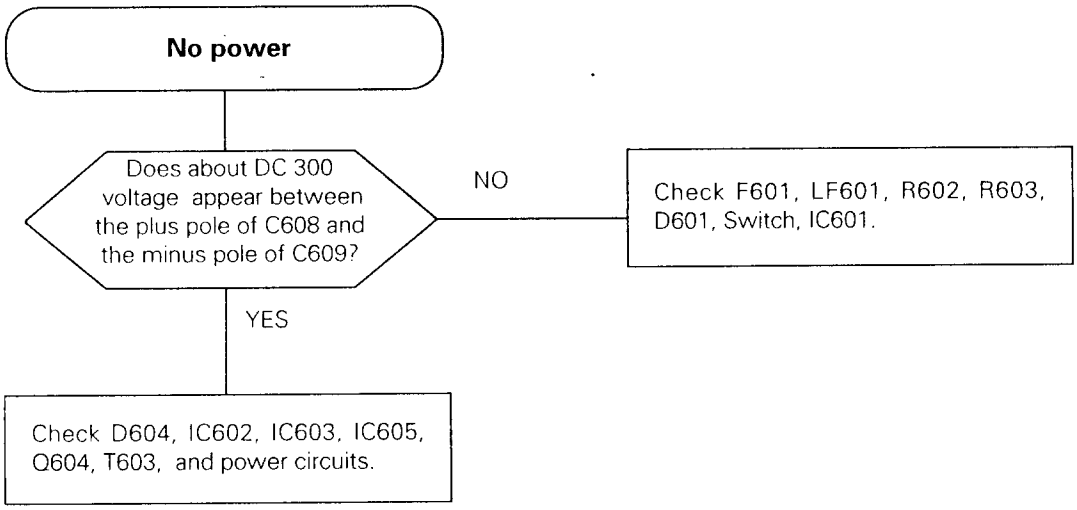
Vertical line on raster (I)
Does 25 V appear at R460, R461?
NO
Check D614, Q413.
YES
Does drain pulse of 20 Vp-p appear at drain of Q412?
NO
Check D403, IC403, Q403, Q404.
YES
Check C451, C452, D417, Q413 and its related circuit.



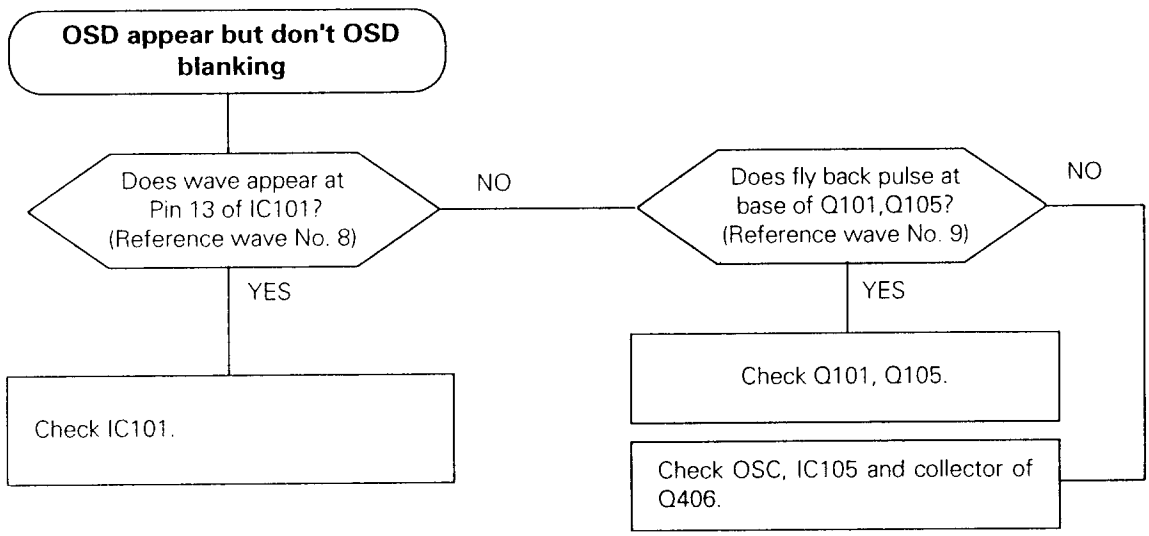
Vertical line on raster (II)
Does 23 Vp-p pulse appear at Pin 6 of IC405?
NO
Check 12 V, 25 V, IC405 line.
YES
Does 200 Vp-p pulse appear at gate of Q410?
NO
Check C443, D406, D413, D414, Q410, Q411, R455, R456, R458.
YES
Check C451, C452, D417, Q412, Q413.



Raster appears but picture does not appear
Does 90 V appear at CN603 on the Main PCB?
NO
Check the power supply circuits.
YES
Does video pulse appear at the Pin4, 6, 9 of IC101?
NO
Check the signal cable or video input circuit. (RL1, RL2, IC107, IC108)
YES
Does video pulse appear at the pin17, 22, 26 of IC101?
NO
Check the video pre-AMP circuits. (IC101)
YES
Does video pulse appear at the cathode of CRT?
NO
Check the video output circuit. (QR2,QG2,QB2,ICR01,ICB01,QR3, QG3,QB3,ICG01,IC103)
YES
Check the IC203, CRT.



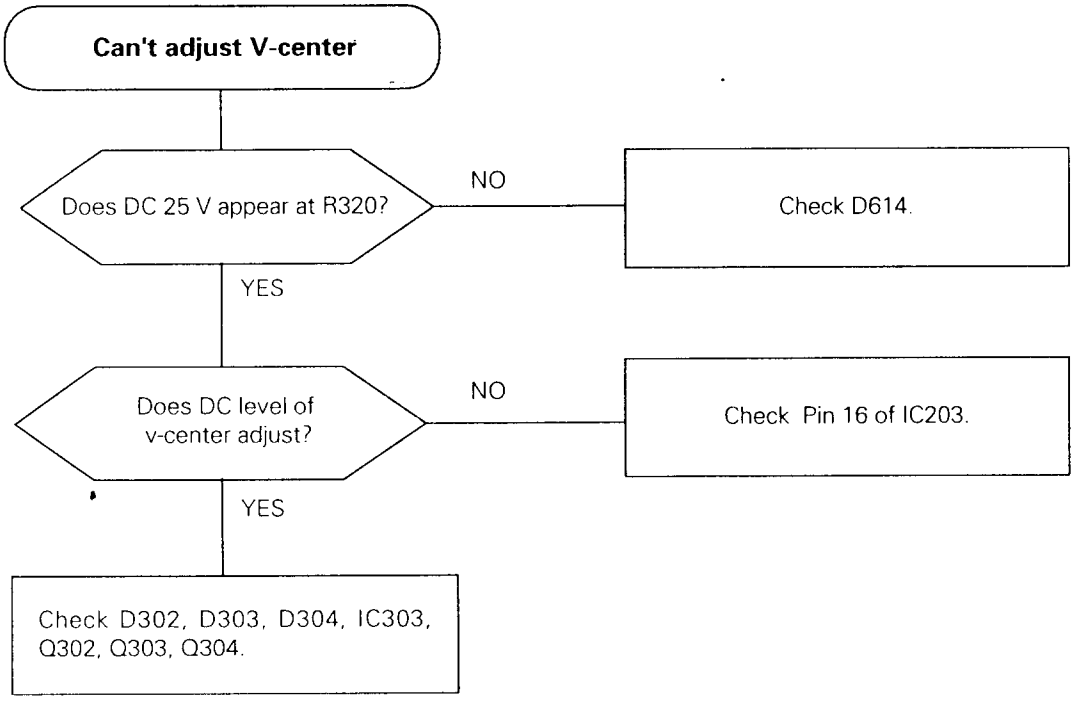
No power
Does about DC 300 voltage appear between the plus pole of C608 and the minus pole of C609?
NO
Check F601, LF601, R602, R603, D601, Switch, IC601.
YES
Check D604, IC602, IC603, IC605, Q604, T603, and power circuits.



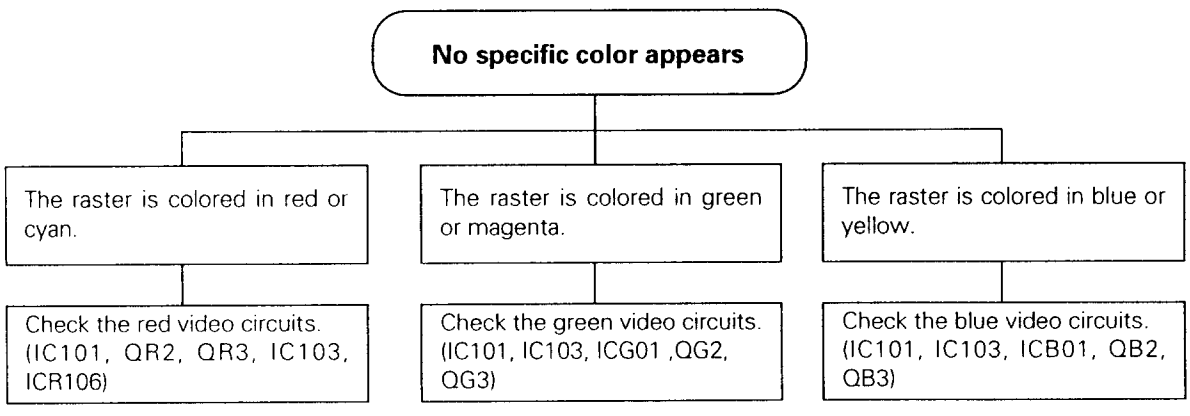
OSD appear but don't OSD blanking
Does wave appear at Pin 13 of IC101? (Reference wave No. 8)
NO
Does fly back pulse at base of Q101,Q105? (Reference wave No. 9)
NO
YES
YES
Check IC101.
Check Q101, Q105.
Check OSC, IC105 and collector of Q406.

	S5	S4	S3	S2	S1
Under 33kHz	1	1	1	1	1
33 kHz - 40 kHz	0	1	1	1	1
40 kHz - 49 kHz	0	0	1	1	1
49 kHz - 62.5 kHz	0	0	0	1	1
62.5 kHz - 70 kHz	0	0	0	0	1
Over 70 kHz	0	0	0	0	0

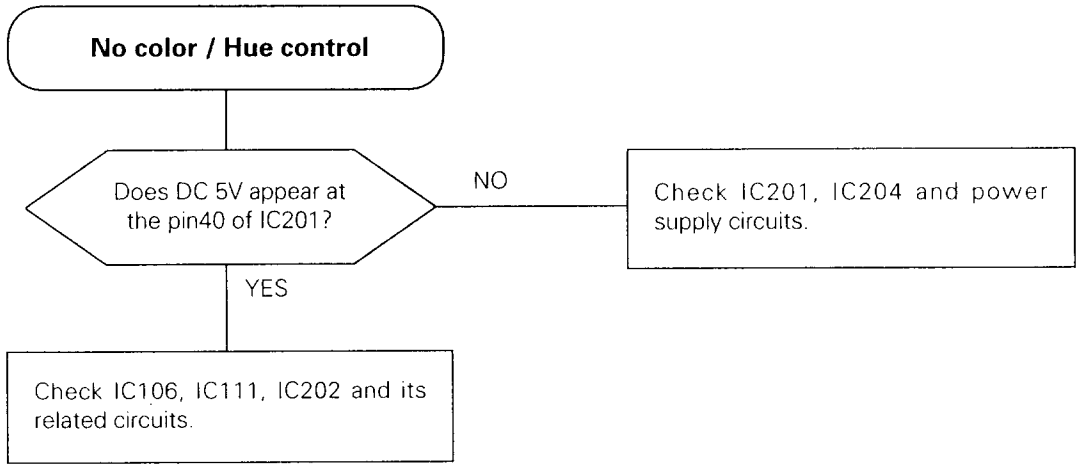
Diagram 1

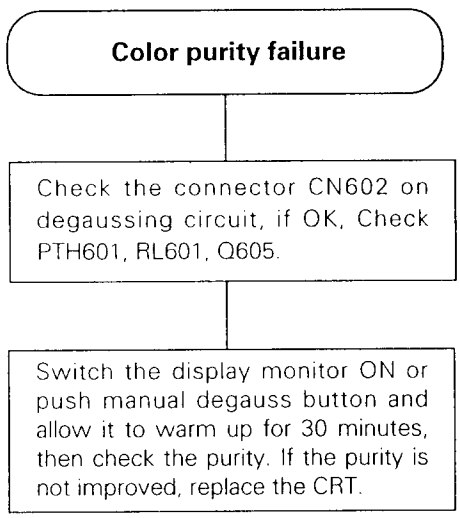


Can't adjust V-center
Does DC 25 V appear at R320?
NO
Check D614.
YES
Does DC level of v-center adjust?
NO
Check Pin 16 of IC203.
YES
Check D302, D303, D304, IC303, Q302, Q303, Q304.

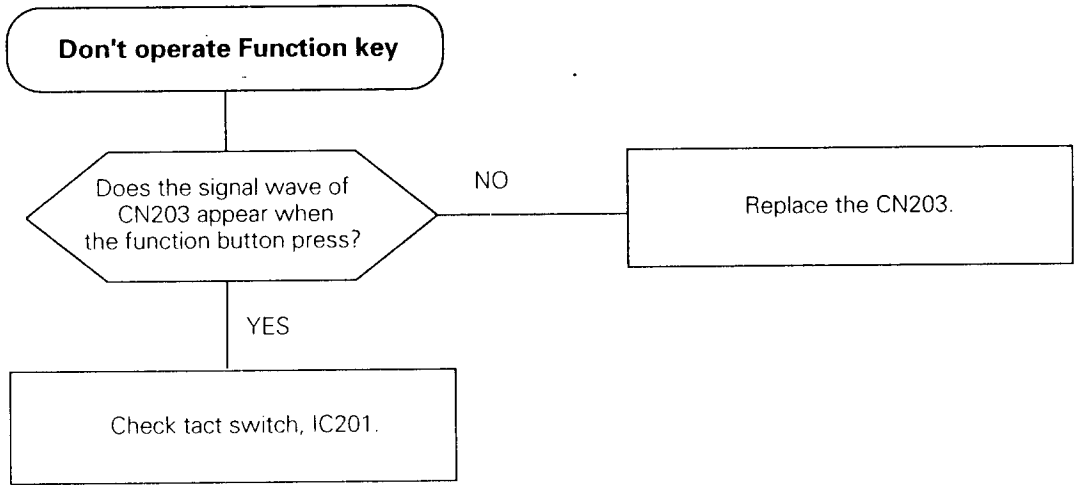


No specific color appears
The raster is colored in red or cyan.
The raster is colored in green or magenta.
The raster is colored in blue or yellow.
Check the red video circuits. (IC101, QR2, QR3, IC103, ICR106)
Check the green video circuits. (IC101, IC103, ICG01 ,QG2, QG3)
Check the blue video circuits. (IC101, IC103, ICB01, QB2, QB3)

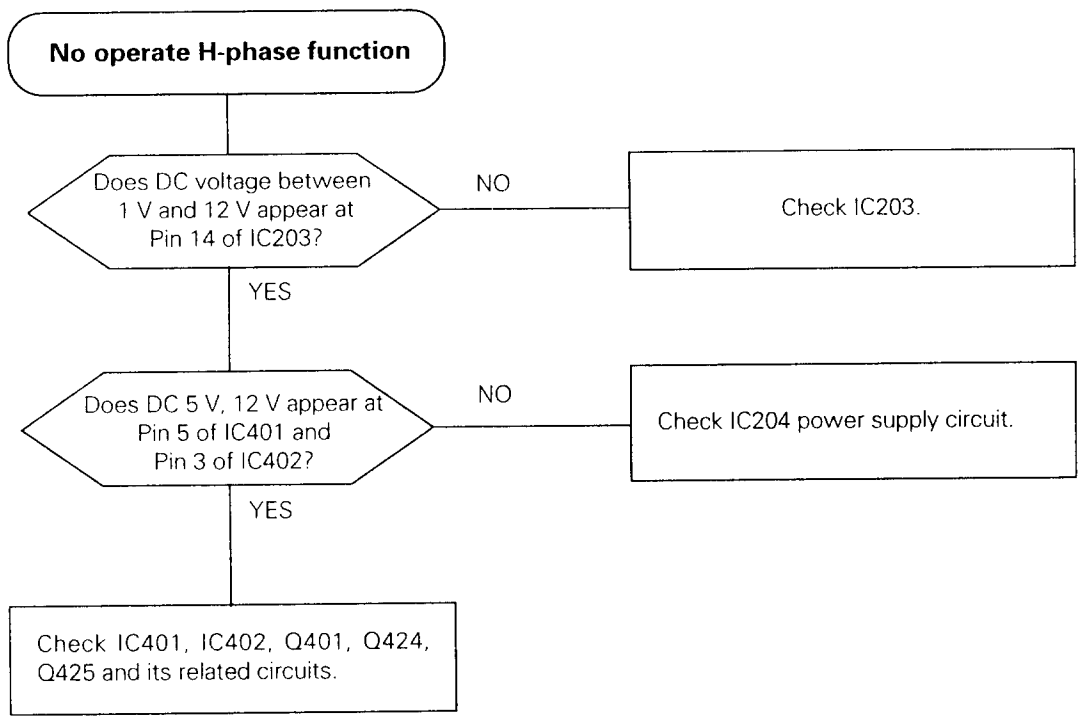




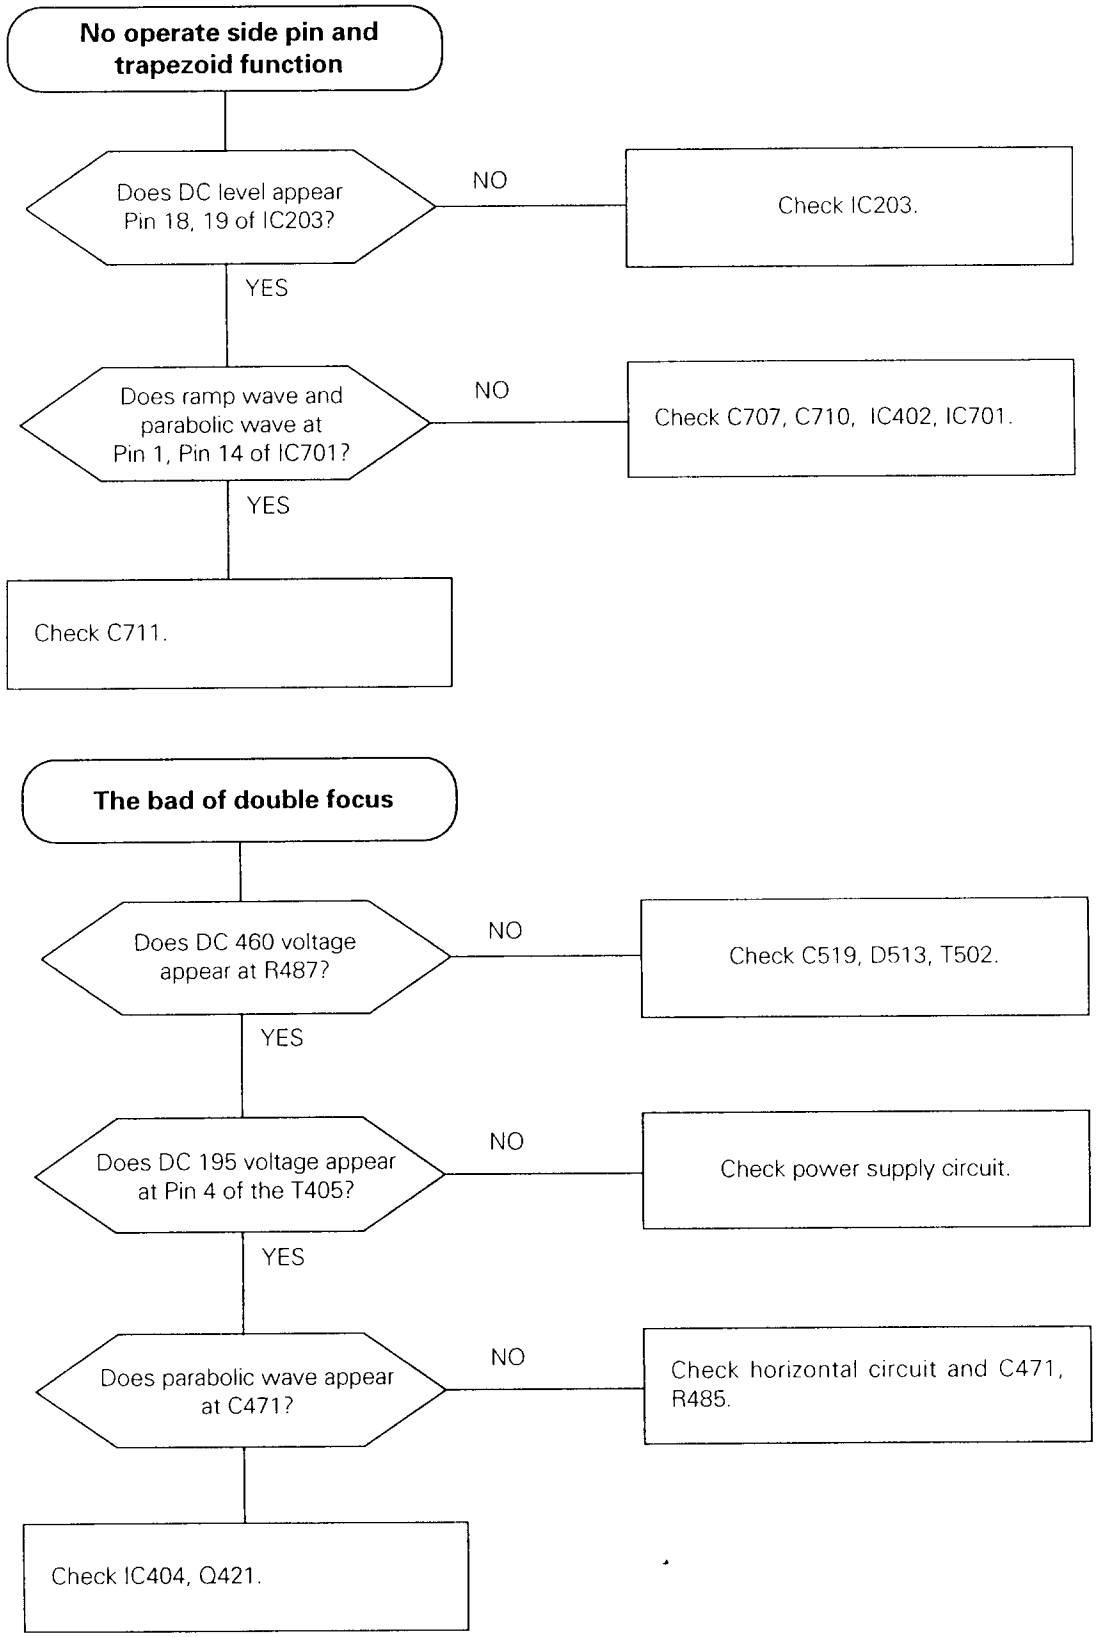
Note: If color purity is not normal, manual degaussing should be done by mandatory method using the manual degaussing coil before inspection.



Don't operate Function key
Does the signal wave of CN203 appear when the function button press?
NO
Replace the CN203.
YES
Check tact switch, IC201.



No operate H-phase function
Does DC voltage between 1 V and 12 V appear at Pin 14 of IC203?
NO
Check IC203.
YES
Does DC 5 V, 12 V appear at Pin 5 of IC401 and Pin 3 of IC402?
NO
Check IC204 power supply circuit.
YES
Check IC401, IC402, Q401, Q424, Q425 and its related circuits.



No operate side pin and trapezoid function
Does DC level appear Pin 18, 19 of IC203?
NO
Check IC203.
YES
Does ramp wave and parabolic wave at Pin 1, Pin 14 of IC701?
NO
Check C707, C710, IC402, IC701.
YES
Check C711.
The bad of double focus
Does DC 460 voltage appear at R487?
NO
Check C519, D513, T502.
YES
Does DC 195 voltage appear at Pin 4 of the T405?
NO
Check power supply circuit.
YES
Does parabolic wave appear at C471?
NO
Check horizontal circuit and C471, R485.
Check IC404, Q421.

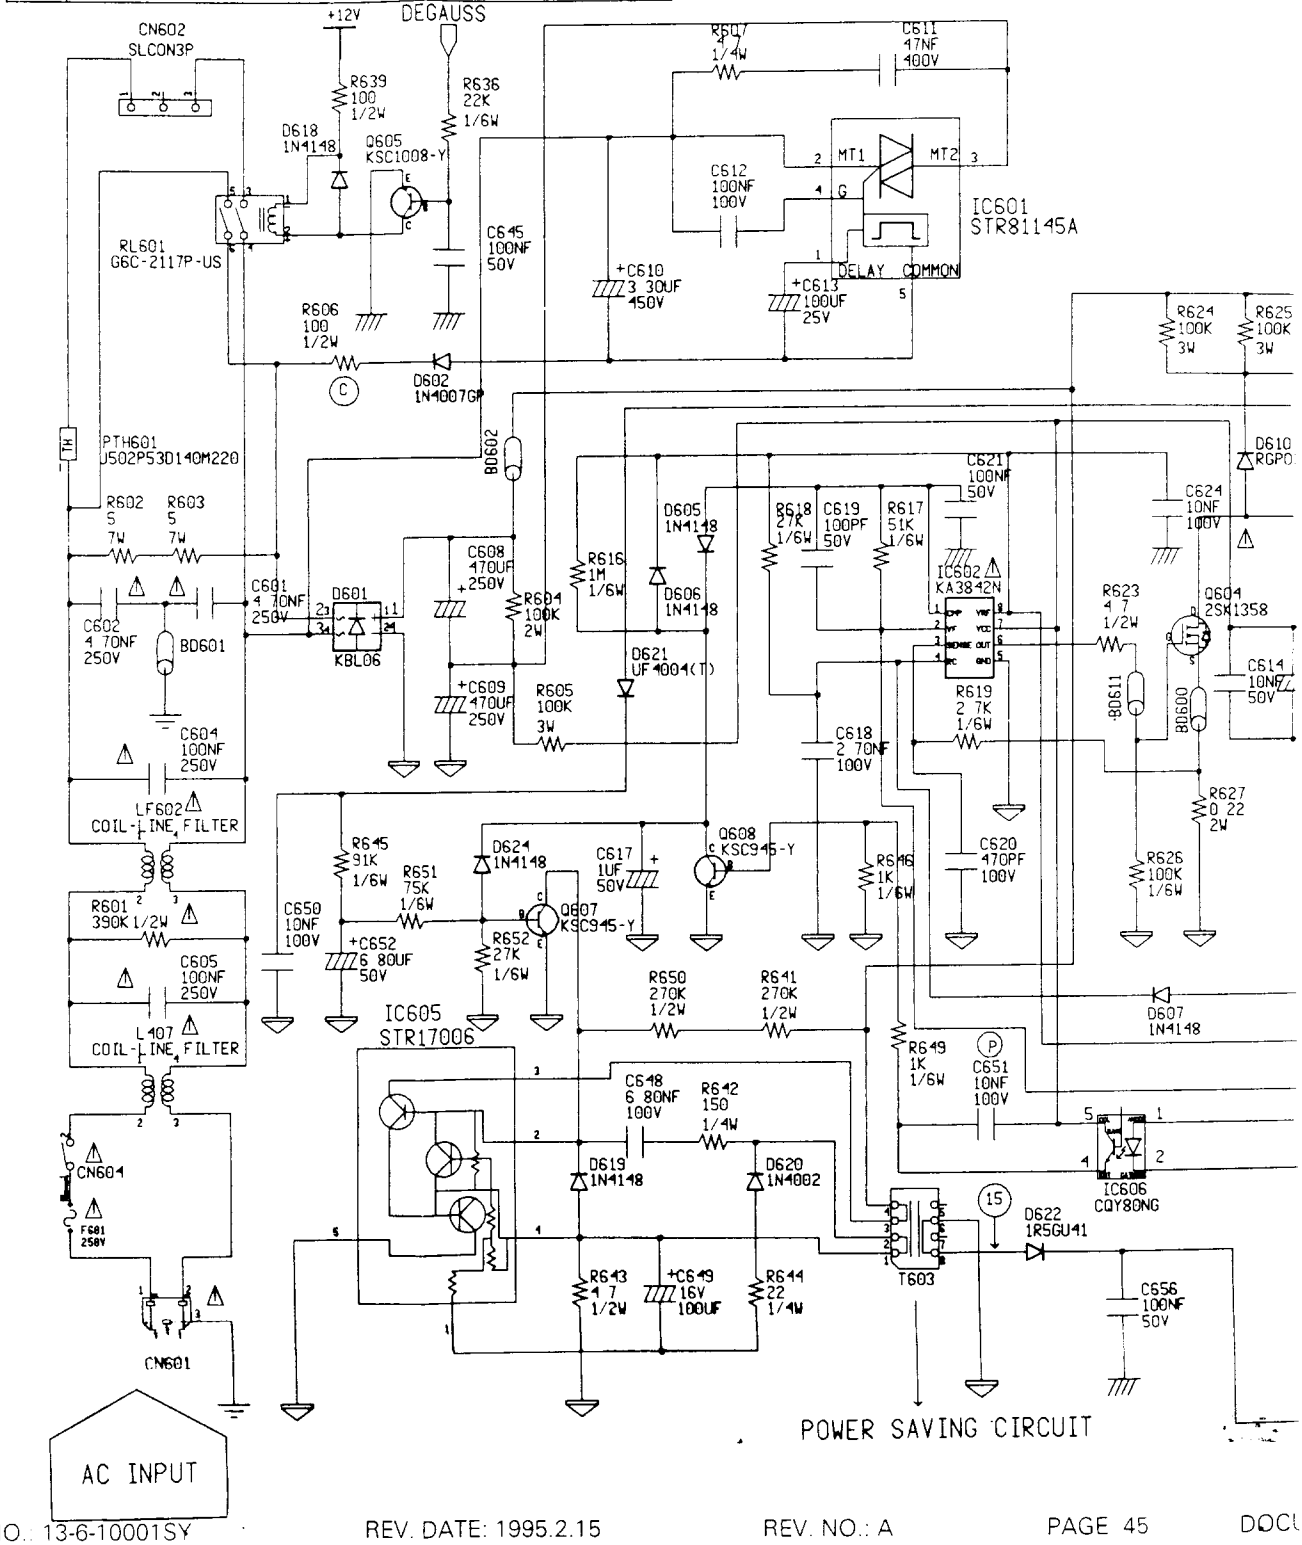
CAUTION
1 THE SHADED AREAS OR MARKS IN THE SCHEMATIC DIAGRAM AND THE PARTS LIST DESIGNATE COMPONENTS WHICH HAVE SPECIAL CHARACTERISTICS IMPORTANT FOR SAFETY AND SHOULD BE REPLACED ONLY WITH TYPES IDENTICAL TO THOSE IN THE ORIGINAL CIRCUIT OR SPECIFIED IN THE PARTS LIST BEFORE RE-PLACING ANY OF THIS COMPONENTS READ CAREFULLY THE "PRODUCT SAFETY NOTICE"
2 DURING A NUMEROUS MEASUREMENT OF THIS MONITOR MATTERS THAT DEMAND SPECIAL ATTENTION IS FOLLOWING
1) DO NOT YOUT GROUND (SYMBOL ⏚) INSTRUMENT BETWEEN PRIMARY AND SECONDARY CIRCUIT
2) DO NOT USE YOUR GROUND (SYMBOL ⏚) INSTRUMENT BETWEEN SECONDARY AND PRIMARY CIRCUIT

WARNING "THIS EQUIPMENT CONTAINS SAFETY CRITICAL COMPONENTS ALL PARTS SHOWN IN THE ⚠ MARK OF THE SCHEMATIC ARE SAFETY REPLACE SAFETY CRITICAL COMPONENTS ONLY WITH MAUNFACTURERS RECOMMANDED PARTS LIST FOR EXACT REPLACEMENTS "



ETY CRITICAL
ANDED PARTS

NOTE

1 RESISTANCE IS SHOWN IN OHM K=1000, M=1000000
RATED POWER OF RESISTOR NOT NOTED IN SCHEMATIC DIAGRAM IS 1/4W

2 CAPACITANCE IS SHOWN UF AND NOT NOTED
CAPACITANCES IS SHOWN PF, 1UF=1000000PF
RATED VOLTAGE OF CONDENCER NOT NOTED IN SCHEMATIC DIAGRAM IS 50V

3 ABBREVIATION AND SYMBOL

MO R-METAL OXIDE	MC C-MONOLYTIC
WW R-WIRE WOUND	NPO C-NPO
F R-FUSIBLE	PP C-POLYPROPYLENE
C R-COMPOSITION	MP C-M, POLYESTER
CM R-CEMENT	T C-TANTALIUM
POLY C-POLYESTER	X C-X7R

PRIMARY GND SECONDARY GND

4 THE SECONDARY VOLTAGE IS READ WITH VTVM FROM INDICATED POINT TO SECONDARY GROUND

THE PRIMARY VOLTAGE IS READ WITH VTVM FROM INDICATED POINT TO PRIMARY GROUND

5 THIS SCHEMATIC DIAGRMA IS SUBJECTED TO CHANGE WITHOUT NOTICE FOR FURTHER IMPROVEMENT
